live your dream

1. Introduction

This document explains about the new functionalities which are proposed as enhancements to the current application.

2. Impacted Areas

2.1. Internal System

S.No	Module	Functionality	Description
1.	RM Office	Peer to Peer Benchmark	Peer to Peer Benchmarking on quarterwise Net New Money
2.	RM Office	Customer	Auto linking of prospect to customer if the customer id matches with prospect while onboarding.
3.	CPD	Campaign	Modification in existing campaign management- General Tab and financial Tab
4.	RM office	RM Dashboard	Campaign (Budgeted vs Actual)

2.2. External Systems

Not Applicable

3. Process Flow

3.1. Peer to Peer Benchmarking Widget Changes

1. Earlier the Peer to Peer Benchmarking Widget displays the below parameters for the Held In Portfolio of the Customer
   a. Total AUM
   b. Wealth AUM
   c. Customers with Wealth Products
   d. Revenue
   e. Net New Money (Month to Date)

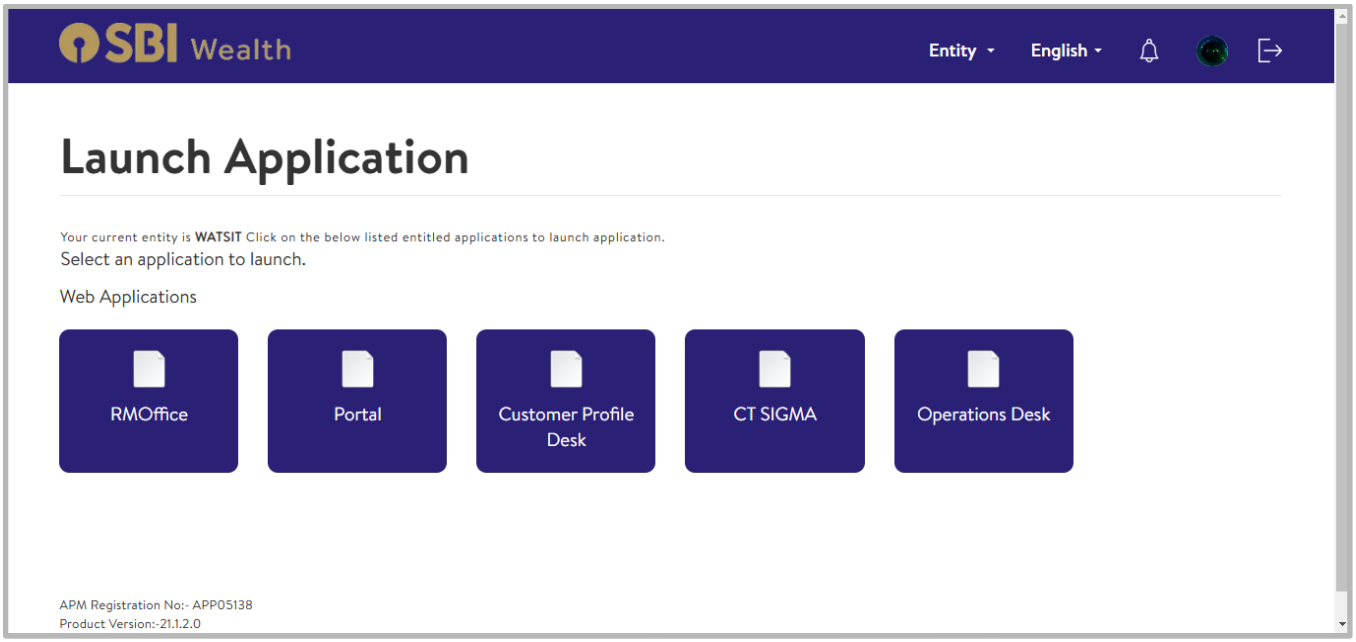
2. As per change, the new widget displays the below table that illustrates the changes made to the Peer to Peer Benchmarking widget; the only change is now showing QTD achievement of Net New Money along with YTD .

#	Parameter	Changes	Logic
1	Total AUM	No Change.	Existing Logic to be continued (Only Held In Portfolio to be considered for Total AUM)
2	Wealth AUM	No Change	Existing Logic to be continued
3	Customers with Wealth Products	No Change Required	Existing Logic to be continued
4	Revenue	No Change Required	Existing Logic to be continued
5	Net New Money (YTD)	No change in logic is the same as earlier for YTD	Existing Logic to be continued
6	Net New Money (Jan-Mar)	New Parameter	Net New Money (Jan-Mar) should display the Net New Money from 01-Jan to 31-Mar for the user logged along with Median and Highest values. This graph will be reset every year
7	Net New Money (Apr-Jun)	New Parameter	Net New Money (Apr-Jun) should display the Net New Money from 01-Apr to 31-Jun for the user logged along with Median and Highest values. This graph will be reset every year
8	Net New Money (Jul-Sep)	New Parameter	Net New Money (Jul-Sep) should display the Net New Money from 01-Jul to 31-Jun for the user logged along with Median and Highest values. This graph will be reset every year
9	Net New Money (Oct-Dec)	New Parameter	Net New Money (Oct-Dec) should display the Net New Money from 01-Oct to 31-Dec for the user logged along with Median and Highest values. This graph will be reset every year

3. The RM enters their credentials and logs into the application .

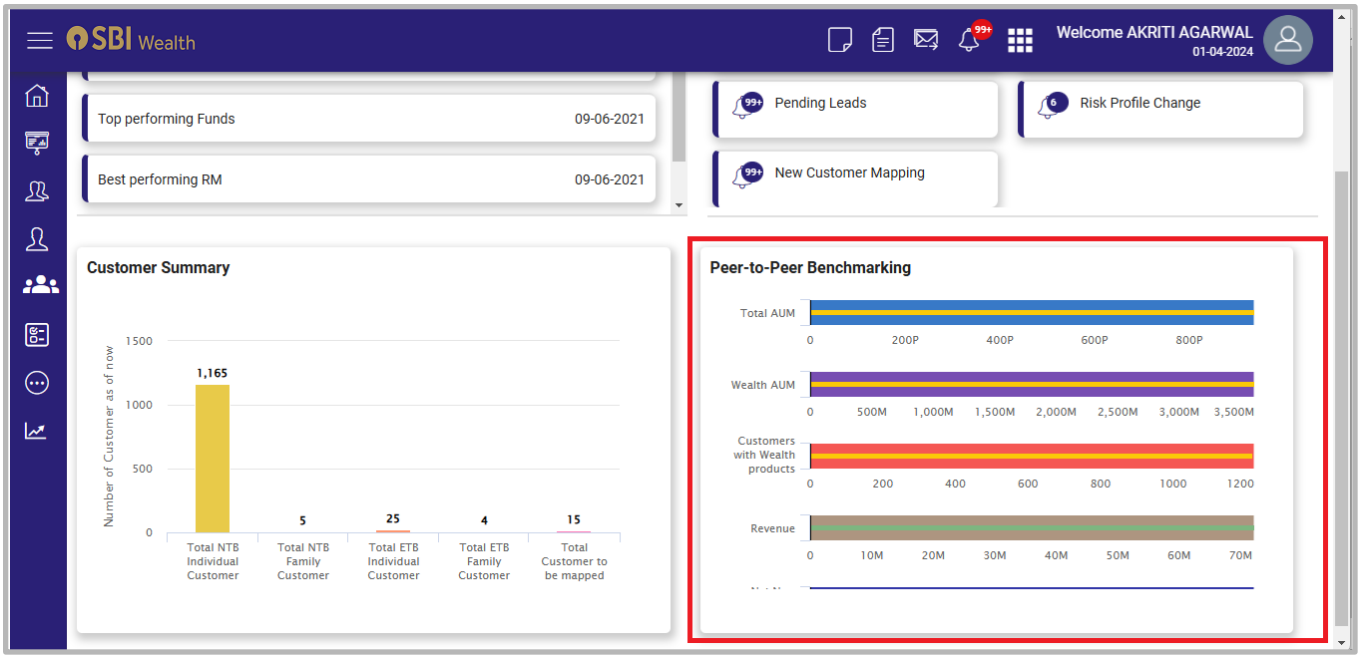
Screen: Launch the application

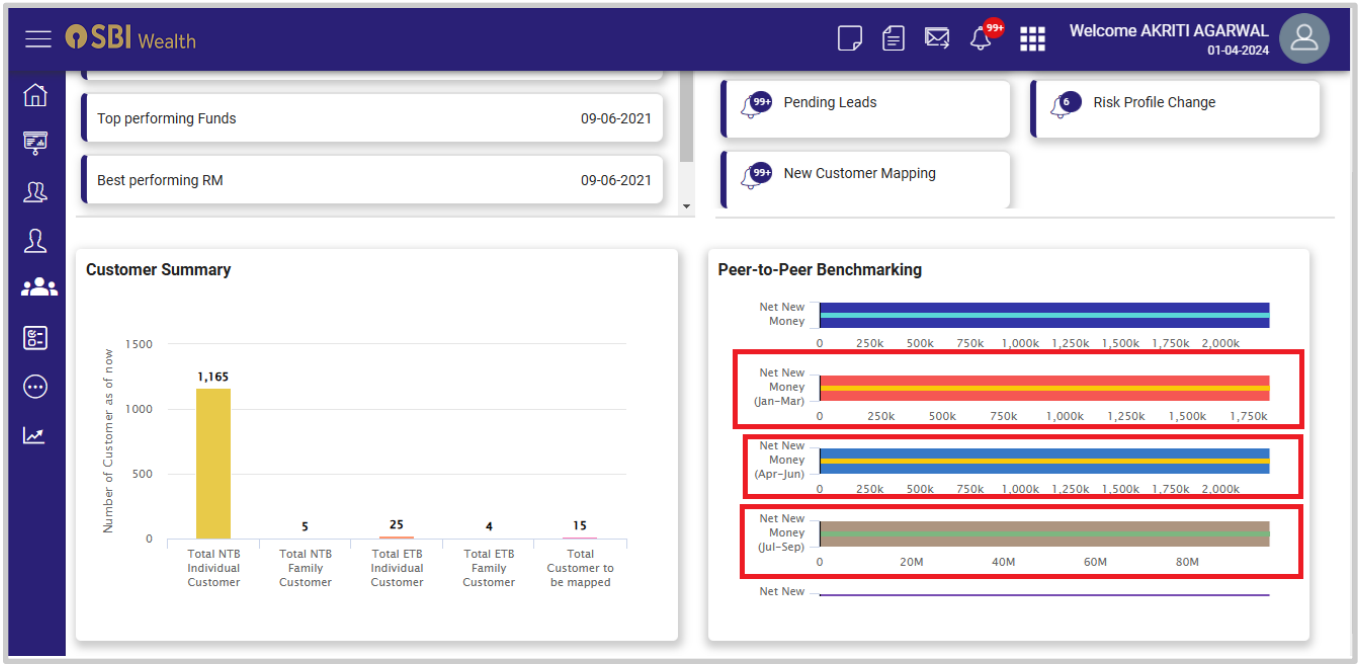
4. Once logged in, they click on “RM Office” to launch the RM Office application.



Screen: Select RM Office

5. Once logged in RM will see the Peer-To-Peer Benchmarking widget on the home page .





6. The following parameters will help the RMs to understand the Net New Money being brought by them for different time periods in comparison with their peers.

3.2. Customer Onboarding: Auto linking of prospect to customer

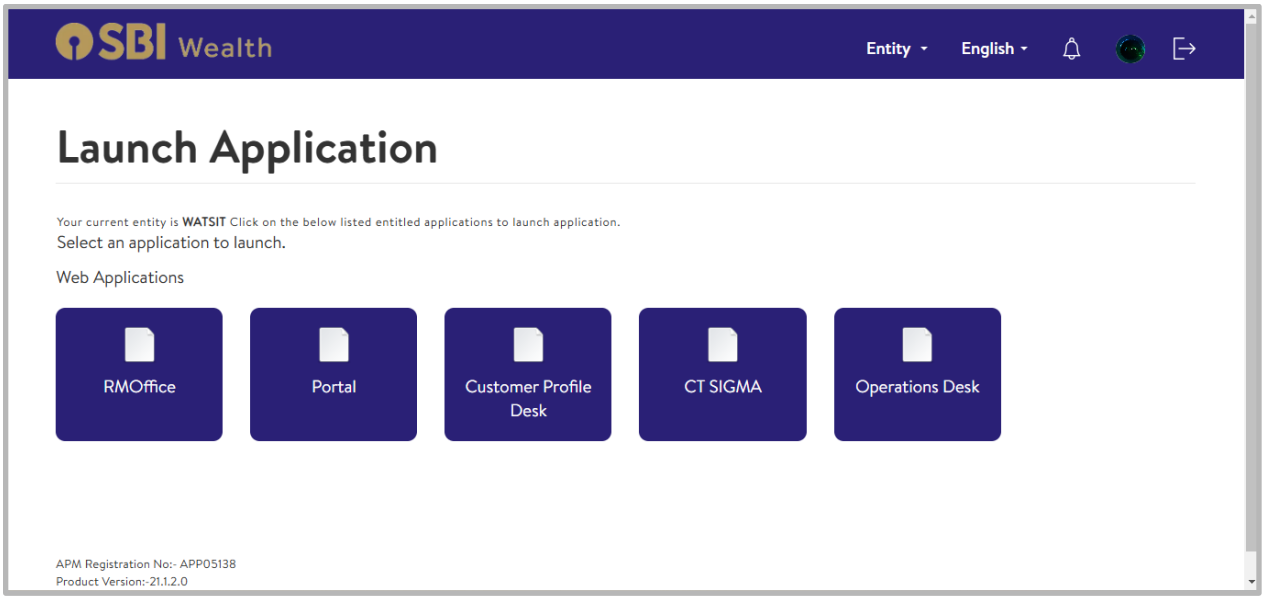
The prospect needs to be converted into a customer to enable individual(s) to get fully on-boarded to IWMS and consume the functionalities available including ability to view holdings, placing orders across all asset classes etc. The Prospect to Customer conversion in IWMS is now an automatic process. The conversion would be on the assumption that only valid details of the prospect are captured in the system. The automatic conversion process only considers mobile no,Email id, ID Type and ID Number fields for matching prospects to the customer.

Conversion happens at the time of on-boarding a customer.Once the prospect is converted to customer the corresponding card is moved to the My Customers page.

1. The RM enters their credentials and logs into the application.

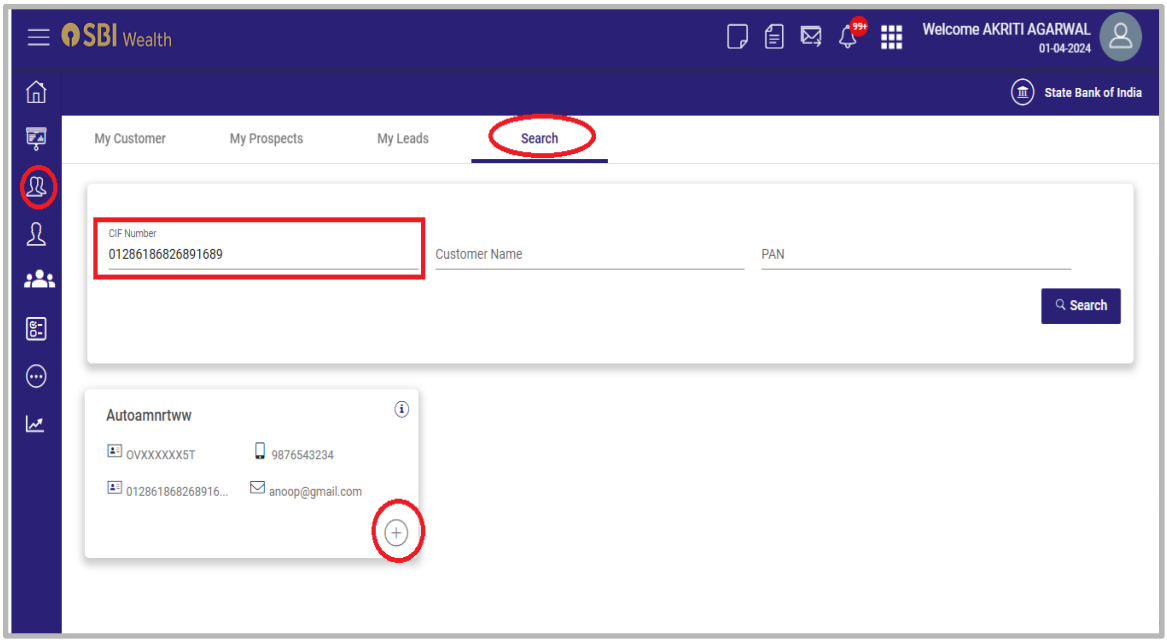
Screen: Launch the application

2. Once logged in, they click on “RM Office” to launch the RM Office application.



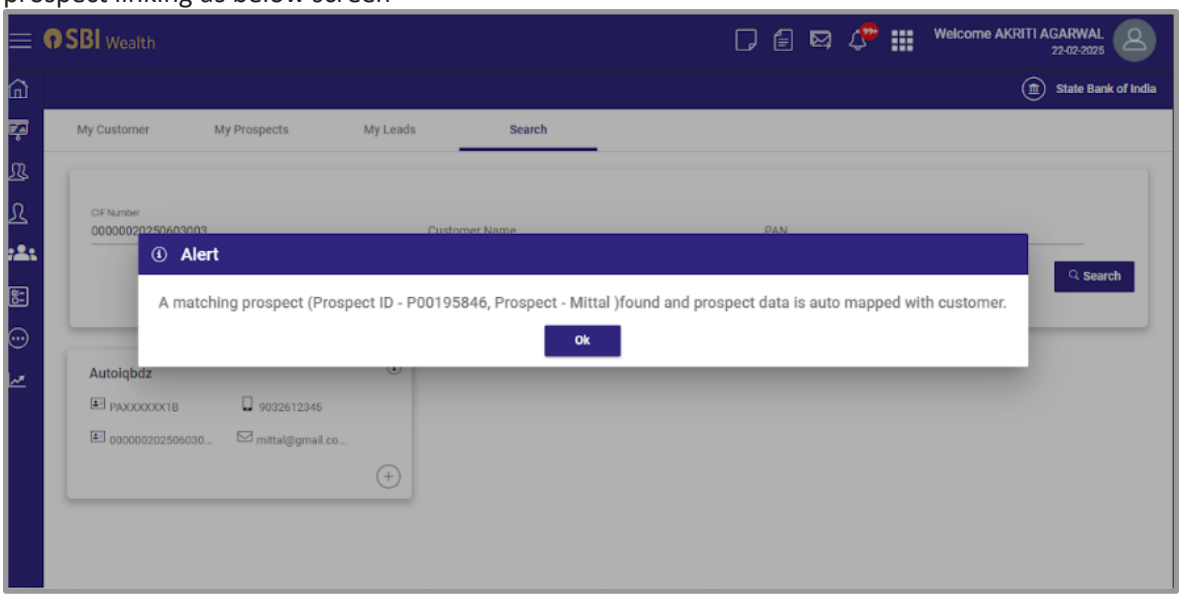
Screen: Select RM Office

3. Once logged in RM click on My customer >>Search>>cif id >>Customer card will appear



Screen- Customer global search

4. Rm needs to click on + icon on customer card to onboard ,upon clicking RM will get a pop up of prospect linking as below screen



Screen- prospect match pop up

5. System will validate the existing prospect on basis of mobile no+email id and ID no.while onboarding a customer details are fetched from the core banking and same if matches with any of the prospect the system will show the prospect match and pop up message with “A matching prospect(Prospect ID-*****,Prospect-name)found and prospect data is auto mapped with customer .RM to click on ok and continue.
6. The automatic conversion would allow the RM to save time on operational tasks and focus more on revenue generating activities. With the automatic conversion duplicate prospects will not be present in the IWMS.The prospect card after mapping won't be available.

3.3. Campaign Management

Currently, Campaign Management captures the budget required for the campaign. There is no processing logic available to compute the revenue generated as a result of the campaign. Campaign efficacy needs to be tracked by plotting budgeted cost vs. actual revenue in a widget in the RM/Supervisor Dashboard

3.3.1. Changes made during Campaign definition (CRM)

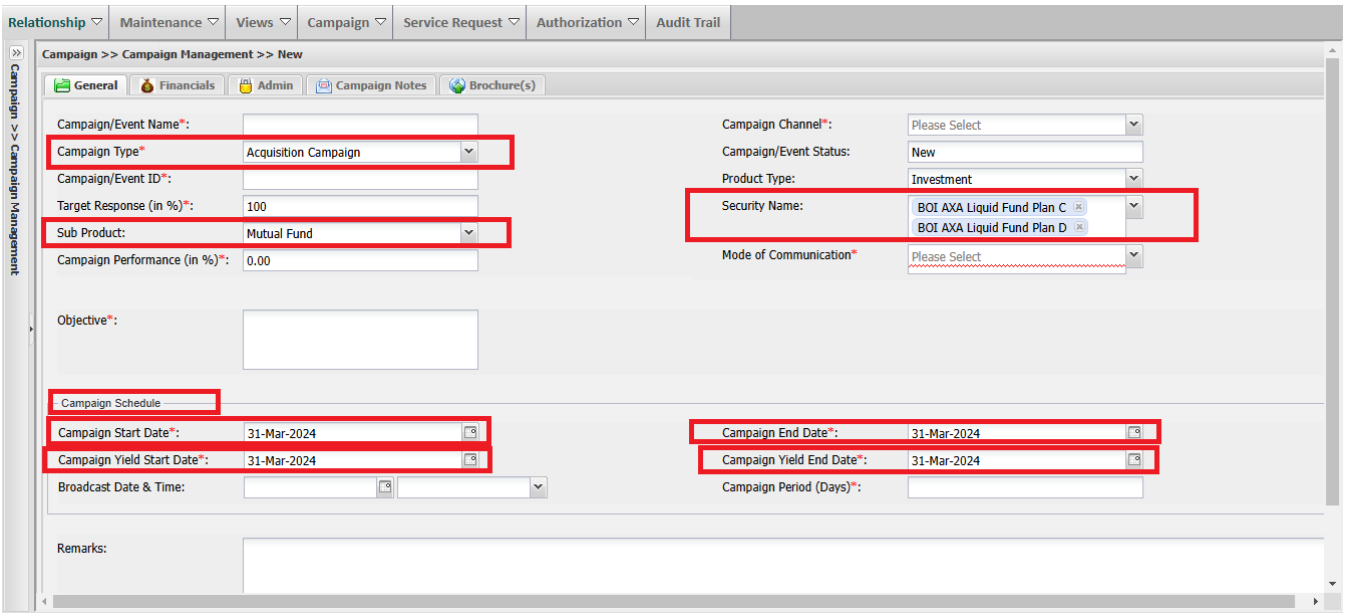
3.3.1.1. General Tab

1. The following field name labels are updated/ added.Admin user to login to application >>crm>>campaign>>campaign management>>New

#	Field Name	User Action	Mandatory	Description	Business Validations	Meta Data Values
1	Campaign Type	Select	Yes	This will list the types of campaigns available	Not Applicable	1. Acquisition Campaign 2. Participation Campaign
2	Sub Product	Select	No	This will list the Sub Products in the system for which the transaction data is available	This field will not be editable for Participation Campaigns. This field will be available for editing only for Acquisition Campaign	1. Mutual Fund 2. Bond Or any product
3	Security Name	Multi Select	No	This will be a Multi Select field, and the List of Securities populated will depend on the Sub Product Type selected. Search based on Full/Partial match as existing in the system should be allowed in this field	This field will not be editable for Participation Campaigns. This field will be available for editing only for Acquisition Campaign	1. List of all authorized securities for the selected sub product 2. All (If a user wants to select all securities for the campaign, all will be selected. This should be present at the top of the list)
4	Campaign Start Date (Old Label : Start Date)	Select	Yes	This will capture the Campaign Start Date. This field is already present, only label change is done	Campaign Start Date cannot be greater than Campaign end date and	Not Applicable

					cannot be a past date	
5	Campaign End Date (Old Label : End Date)	Select	Yes	This will capture the Campaign End Date. This field is already present, only label change is required	Campaign End Date cannot be lesser than the Campaign start date. Campaign End Date cannot be a past date	Not Applicable
6	Campaign Yield Start Date	Select	Yes	This will capture the Campaign Yield Start Date	Campaign Yield Start Date cannot be greater than campaign yield end date and cannot be a past date Campaign Yield Start Date cannot be lesser than campaign start date	Not Applicable
7	Campaign Yield End Date	Select	Yes	This will capture the Campaign Yield End Date	Campaign Yield End Date cannot be lesser than Campaign Yield Start Date Campaign Yield End date cannot be a past date Campaign Yield End Date cannot be less than Campaign end date	Not Applicable

8	Campaign Schedule (Old Label: Schedule)	Not Applicable	Not Applicable	This is a label present in the campaign definition. The label is changed from “Schedule” to “Campaign Schedule”	Not Applicable	Not Applicable



Picture: Campaign Definition - General Tab

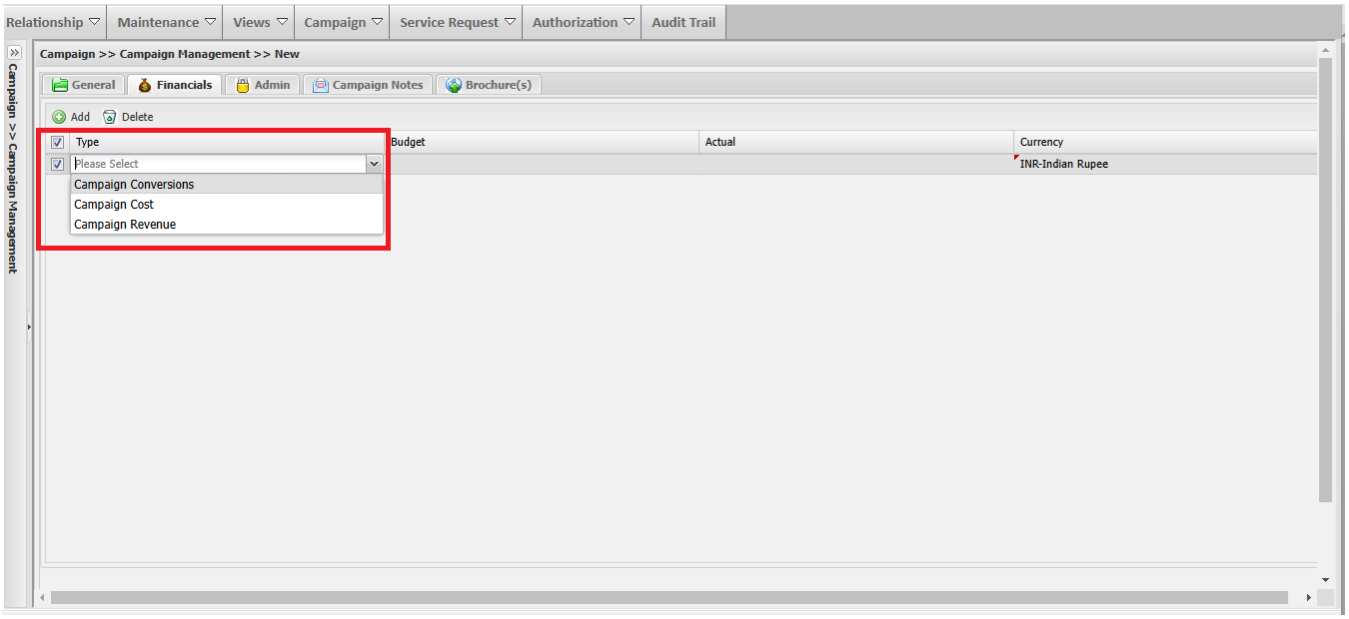
3.3.1.2. Financials Tab

1. The following field name labels are updated/ added.

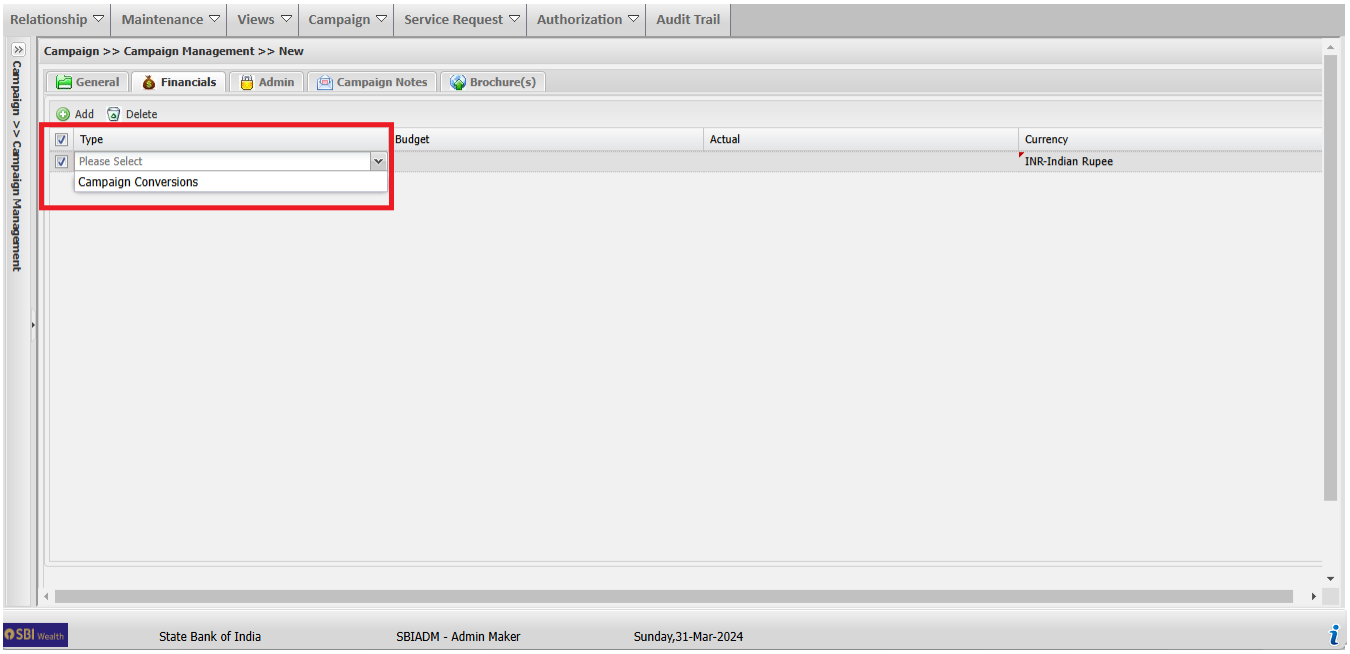
#	Field Name	User Action	Mandatory	Description	Business Validations	Meta Data Values
1	Type (Old Label :Cost Type)	Select	Yes	User selects the financial details for the campaign	**For Acquisition Campaign**, Campaign Cost, Campaign Revenue and Campaign Conversions are mandatory **For Participation Campaign**, only Campaign Conversions will be available for selection and would be mandatory	1. Campaign Cost 2. Campaign Revenue 3. Campaign Conversions
2	Budget	Input	Yes	User inputs the budgeted	**For Acquisition Campaign:** Budgeted	Not Applicable

				campaign cost, budgeted campaign revenue and budgeted campaign conversions Budgeted Campaign Cost and Budgeted Campaign Revenue : Amount is input here Example : 1000000 Budgeted Campaign Conversions : Percentage value is input here Example :(0-100)%	Campaign Cost, Budgeted Campaign Revenue and Budgeted Conversions are mandatory **For Participation Campaign:** Budgeted Conversions are mandatory	
3	Actual (Old Label: Actual Cost)	Input/ Display	No	User inputs the actual campaign cost Actual Campaign Revenue and Actual Campaign Conversions (in %) are computed **Calculations will be discussed in Section 3.2 - Computation Logic**	**For Acquisition Campaign**: Actual Campaign Cost is input, Actual Campaign Revenue and Actual Campaign Conversions are computed by the system **For Participation Campaign**: Actual Campaign Conversions is computed by the system. Actual Campaign Cost and Actual Campaign Revenue are not applicable	Not Applicable

4	Currency	Display	Yes	Displays the currency “INR-Rupee” for Campaign Cost and Campaign Revenue. “Not Applicable” will be displayed for Campaign Conversions	Modifications will not be allowed to this field	1. INR 2. Not Applicable



Picture: For Acquisition Campaign



Picture: For Participation Campaign

2. **All Other Tabs (Admin, Campaign Notes and Brochures) remain unchanged.**

3.3.2. Computation Logic of Actual Campaign Revenue and Conversions (CRM - Campaign Definition)

3.3.2.1. Acquisition Campaign

1. For Acquisition Campaigns, the values of the following fields need to be computed:
    a. Actual Campaign Revenue
    b. Actual Campaign Conversions

2. **Actual Campaign Revenue Computation** -
    a. For Computing the Actual Campaign revenue, the system considers **Campaign Yield Period (Campaign Yield Start Date and Campaign Yield End Date-both dates included).** System should consider **all Purchase Transactions** made by **all Customers only for MF,** for the **promoted Security/Securities** during this period. Revenue would be the aggregation of **the Total Commission (from the MF commission file .)**
        i. Campaign Yield timeline is captured in the Campaign Definition to compute the revenue generated from the campaign
        ii. Securities promoted as part of the campaign are selected in the Campaign Definition
        iii. Total Commission fields (Total Commission) in the mutual fund.
3. **Actual Campaign Conversions Computation** -
    a. Number of leads with response status “Client Accepted” divided by total leads in the campaign in percentage

3.3.2.2. Scenario - Actual Campaign Revenue Computation

1. We will take the following example to understand how the Actual Campaign Revenue will be computed:
    a. **Campaign Type** – Acquisition Campaign
       Sub Product – Mutual Fund
       Security Name – HDFC Top 100 Fund
       Campaign Start Date – 1st Feb 2024
       Campaign End Date – 15th Feb 2024
       Campaign Yield Start Date – 10th Feb 2024
       Campaign Yield End Date – 10th July 2024
2. The below table shows the transactions made by customers for the Security "HDFC Top 100 Fund"

Customer Name	First Transaction Date	Revenue Collected on First Transaction	Second Transaction Date	Revenue Collected on Second Transaction
John	5th Feb 2024	100	15th Feb 2024	55
Raymond	20th Mar 2024	50	31st Dec 2024	45
Susan	10th Feb 2024	100	10th Jul 2024	20
Mary	5th Jan 2024	75	1st Apr 2024	30
Amy	12th Feb 2024	25	20th October 2024	10
Endang	5th Feb 2024	150	15th Feb 2024	70
Megan	20th Mar 2024	70	31st Dec 2024	50
Sultan	5th May 2024	120	30th Jun 2024	30
Casyatun	5th Jan 2024	80	1st Apr 2024	40
Wajido	5th May 2024	10	30th Jun 2024	30

Transactions Table

3. The Fee received for the Transactions made by all the Customers for the Security – "HDFC Top 100 Fund" during the **Campaign Yield Period** (10th Feb 2024 and 10th Jul 2024) will be aggregated
4. Applicable transactions fees which will be aggregated are marked in Green in the Transactions table

   Actual Revenue = 55+50+100+20+30+25+70+70+120+30+40+10+30= 650

5. The same method to calculate the Actual Campaign revenue will be applied for Bonds as well
6. **This actual revenue will be displayed in the Campaign Definition - Financials Tab, under the Campaign Revenue -Actual field in CRM. This would be updated at each EOD till the campaign yield end date (including that also)**

3.3.2.3. Scenario - Actual Campaign Conversions Computation

1. To track the campaign conversions, system will only consider only those leads that were tagged to the campaign.
2. We will take the following example to understand how the Actual Campaign Conversions will be computed:
    i. **Campaign Type** – Acquisition Campaign

ii. **Sub Product** – Mutual Fund
iii. **Security Name** – HDFC Top 100 Fund
iv. **Campaign Start Date** – 1st Feb 2024
v. **Campaign End Date** – 15th Feb 2024
vi. **Campaign Yield Start Date** – 10th Feb 2024
vii. **Campaign Yield End Date** – 10th July 2024

3. The above campaign has 10 leads.

#	Lead Name	Status
1	John	Client Accepted
2	Jack	Expired
3	Susan	Client Accepted
4	Irfan	In Progress
5	Amy	Client Accepted
6	Mary	Client Accepted
7	Sultan	Client Accepted
8	Salim	Client Rejected
9	Casyatun	Client Accepted
10	Wajido	Client Accepted

4. In the "Actual" Field in Campaign Conversions, only the **leads whose Lead Status is "Client Accepted"** will be considered
5. **Campaign Conversions - Actual** = (No. of Leads with Lead status "Client Accepted"/Total Number of Leads In the Campaign)*100 = (7/10)*100 = 70%
6. These actual conversions will be displayed in the Campaign Definition - Financials Tab, under Campaign Conversions- Actual field in CRM. This would be updated at each EOD till the campaign yield end date (including that also

3.3.2.4. Participation Campaign

Actual Campaign Conversions Computation - Number of leads with response status "Client Accepted" divided by total leads in the campaign in percentage

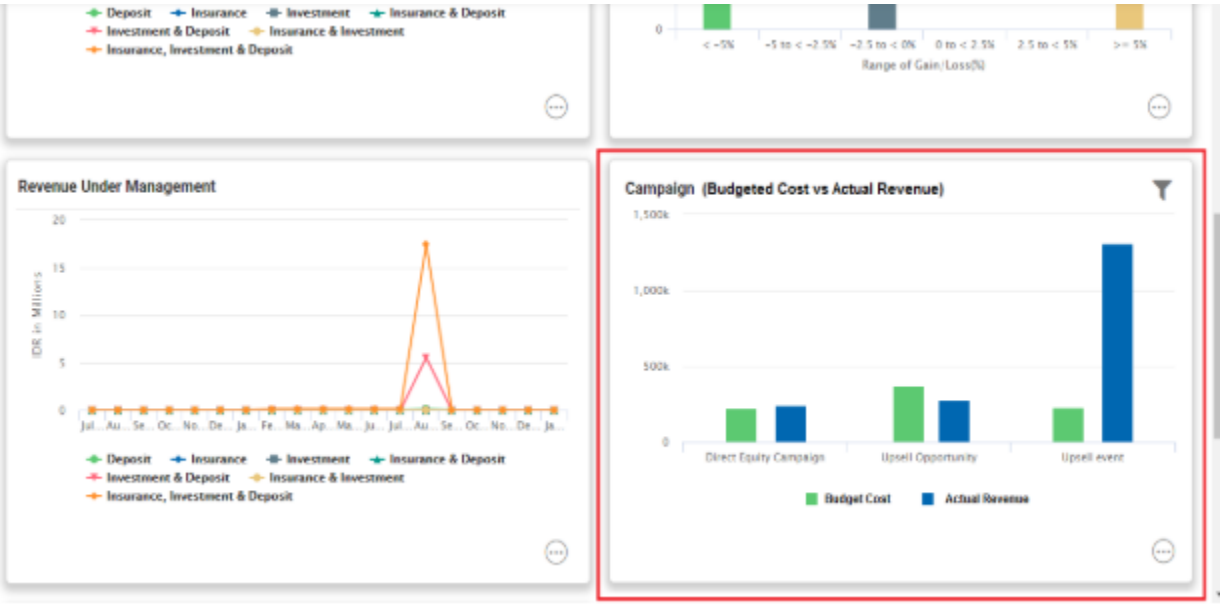
1. **Campaign Conversions – Actual**

The logic for computing the Actual Campaign Conversions for the Participation Campaign type will be the same as the computing logic for Campaign Conversions – Actual for Acquisition Campaigns

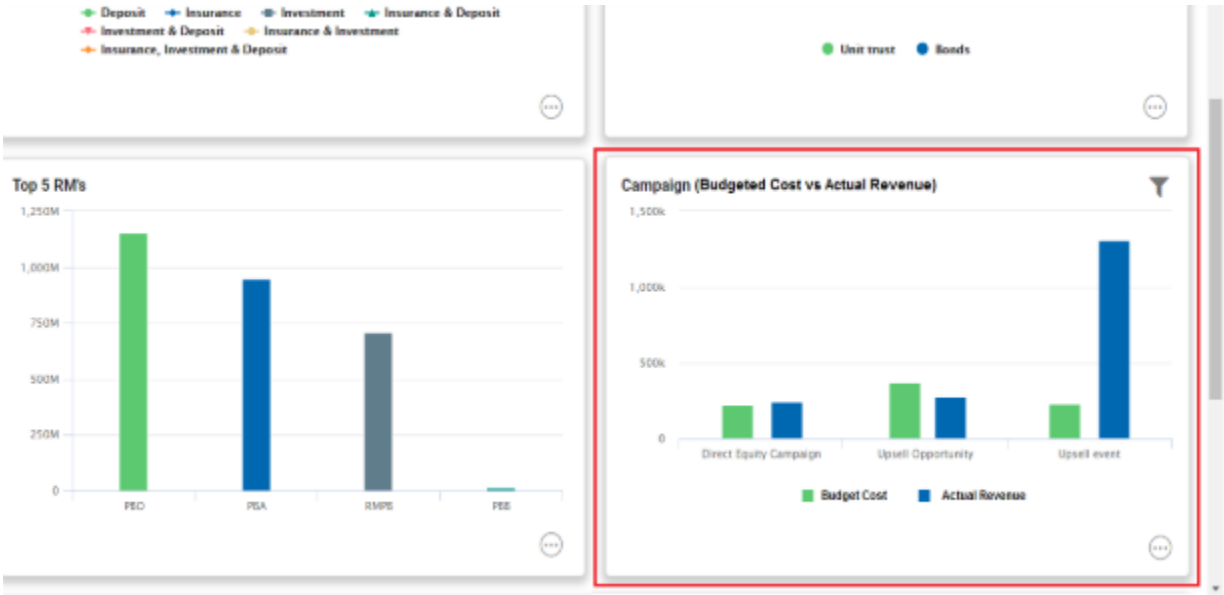
3.3.3. Campaign Budgeted Cost vs. Actual Revenue widget in RM and Supervisor Dashboard

3.3.3.1. RM/Supervisor Dashboard

1. The "**Campaign (Budgeted Cost vs Actual Revenue)"** widget will be shown in the RM/Supervisor Dashboard



Picture: RM Dashboard - Campaign (Budgeted Cost vs Actual Revenue) Widget & Supervisor Dashboard Individual - Campaign (Budgeted Cost vs Actual Revenue) Widget



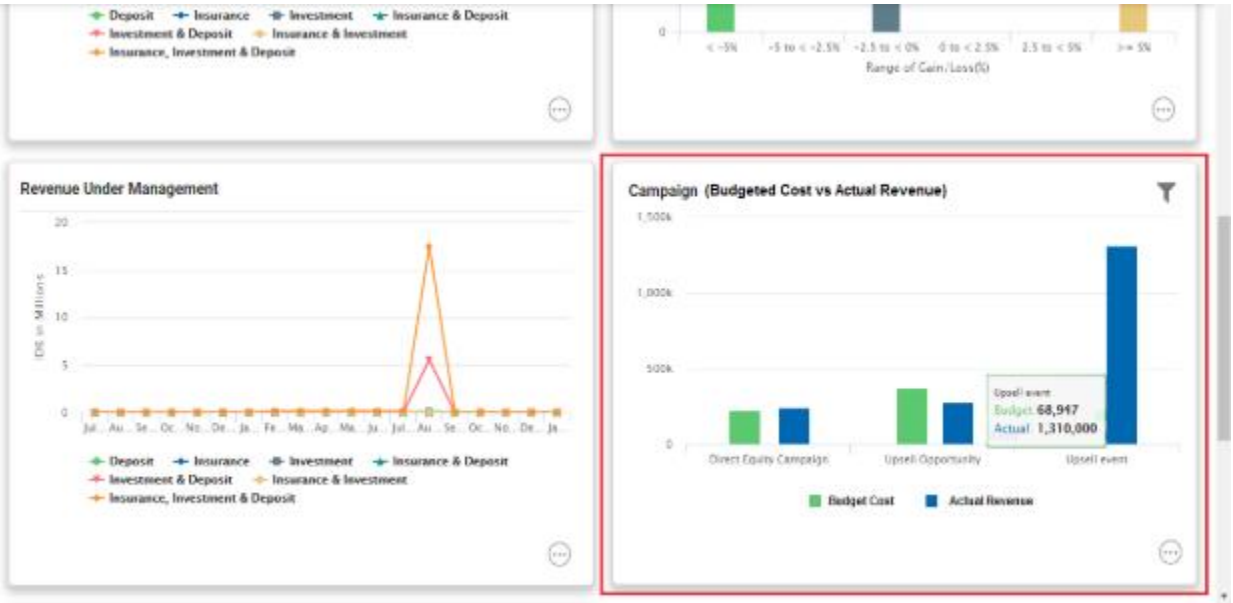
Picture: Supervisor Dashboard Team - Campaign (Budgeted Cost vs Actual Revenue) Widget

2. By default, this widget will plot the "Budgeted Cost" and "Actual Revenue" for the **Latest 3 authorized campaigns where the Campaign Yield Start Date < Business Date**

Example: There are a total of 5 campaigns

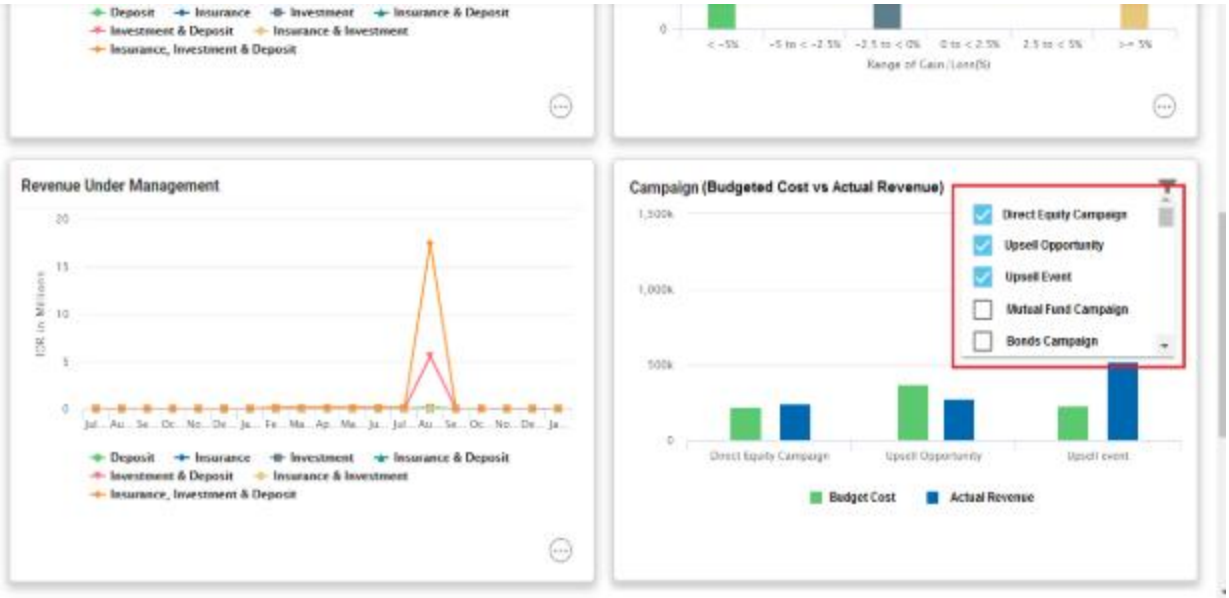
Campaign Name	Campaign Start Date	Campaign End Date	Campaign Yield Start Date	Campaign Yield End Date	Authorization Date	Business Date
Upsell Opportunity	1st Jan 2021	31st Jan 2021	20th Jan 2021	10th Feb 2021	15th Dec 2020	15th Jan 2021
Upsell Event	5th Jan 2021	20th Jan 2021	6th Jan 2021	15th Jan 2021	20th Dec 2020	15th Jan 2021
Direct Equity Campaign	8th Jan 2021	31st Jan 2021	15th Jan 2021	20th Feb 2021	10th Dec 2020	15th Jan 2021
Mutual Fund Campaign	15th Dec 2021	15th Jan 2021	1st Jan 2021	10th Jan 2021	1st Dec 2020	15th Jan 2021
Bonds Campaign	25th Nov 2021	30th Nov 2021	1st Dec 2021	15th Dec 2021	15th Nov 2020	15th Jan 2021

3. **By Default**, the latest 3 authorized campaigns (where Campaign Yield Start Date < Business Date), that is the **Upsell Event, Mutual Fund Campaign** and then the **Bonds Campaign** will be shown in the RM/Supervisor Dashboard, in the same order which is - the latest authorised campaign first
4. A maximum of 3 campaigns will be shown in the widget
5. The User can hover over the bar graphs to view the detailed numbers for the campaign



Picture: Campaign – Hover

6. If RM/Supervisor wants to view the above metrics for other campaigns, RM/Supervisor will be able to select a maximum of 3 campaigns that he would want to view from the filter available in the top right corner of the widget. This filter will show the list of all the authorized campaigns (where Campaign Yield Start Date < Business Date). **The user can select the campaign using campaign name from the filter**



Picture: Campaign Filter

7. The RM/Supervisor will be able to view L2 details by clicking on the Three dots in the bottom right corner of the widget
8. The L2 view will show the following details for all the authorized campaigns (where Campaign Yield Start Date < Business Date). The below order will be followed while displaying any transaction card in L2
    a. Campaign Name
    b. RM Name
    c. Customer Name
    d. Sub Product
    e. Security Name
    f. Revenue (Aggregated revenue for combination of Customer, Sub Product and Security)
9. The sorting logic for displaying the L2 view would be:
    a. First – By the Campaign Yield Start Date (Latest Authorized first)
    b. In case there are multiple Campaigns on the same date, then the campaigns would be listed in Alphabetical Order (A to Z)
    c. Second – In descending order of Revenue (Highest Revenue first)
    d. In case there are multiple entries in a campaign with the same Revenue, then the sorting order followed would be in Alphabetical order of the Customer Name
