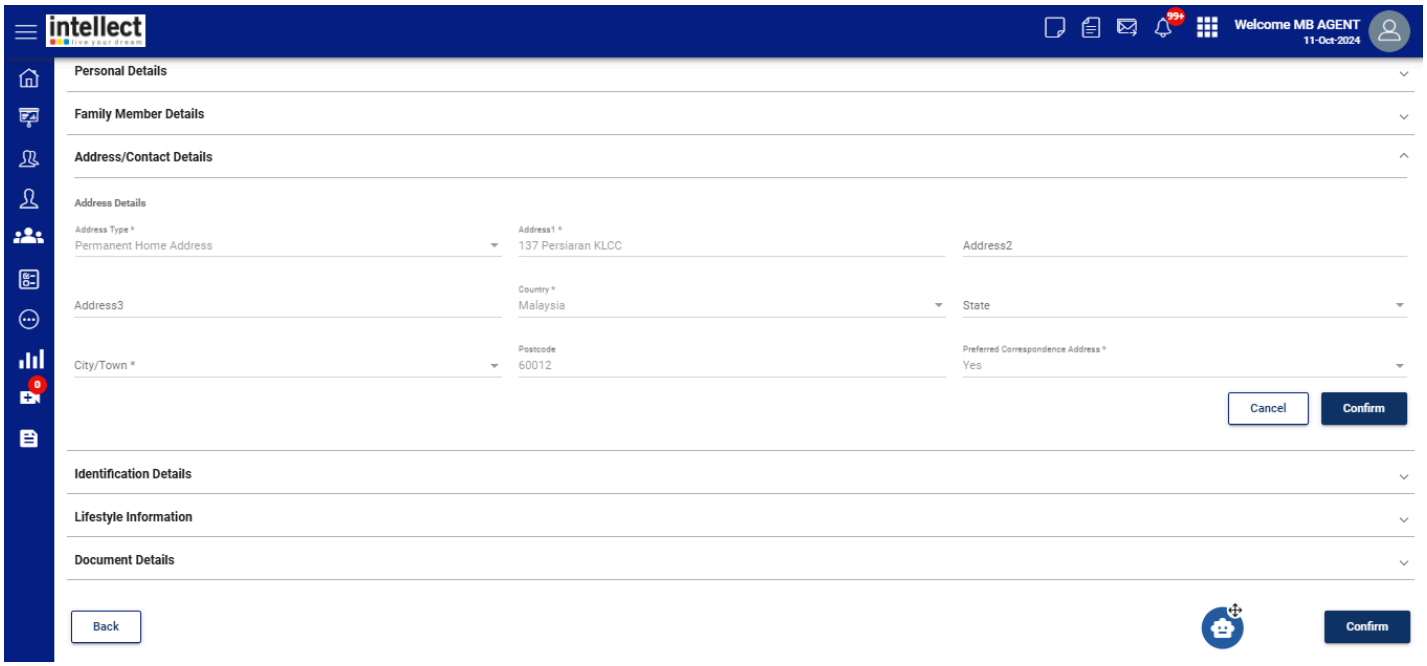
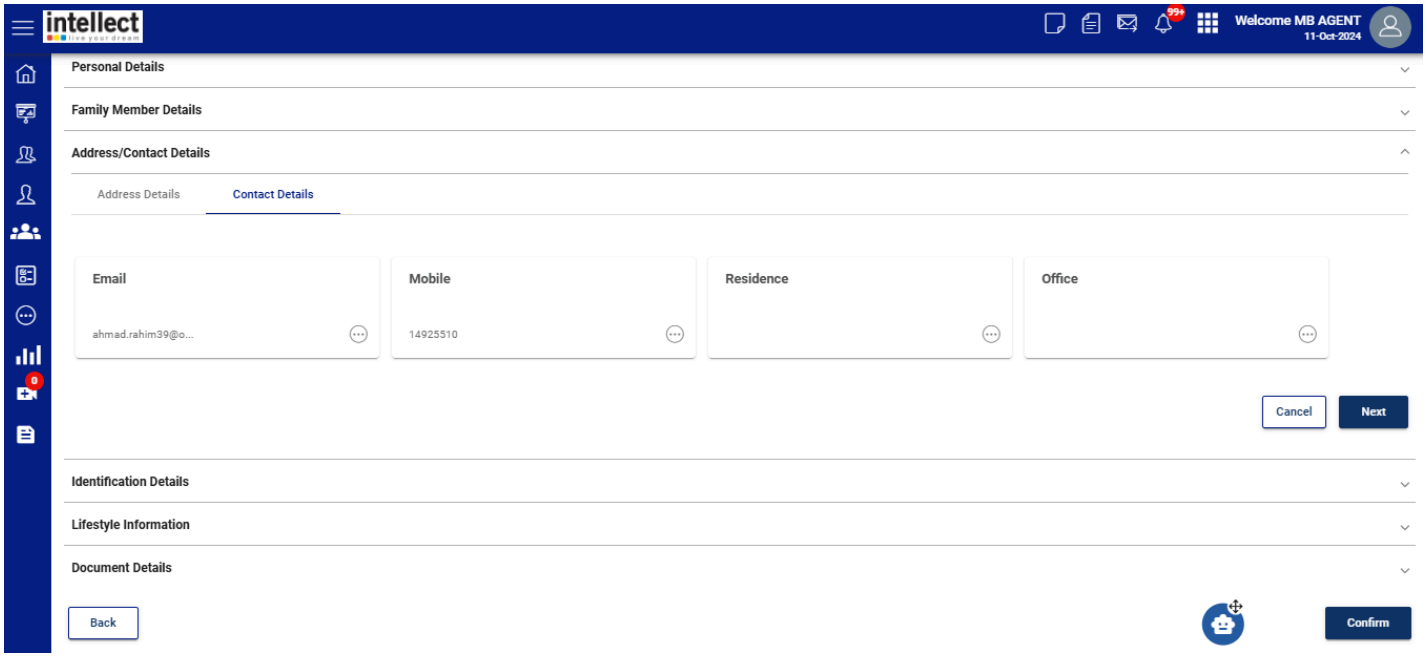
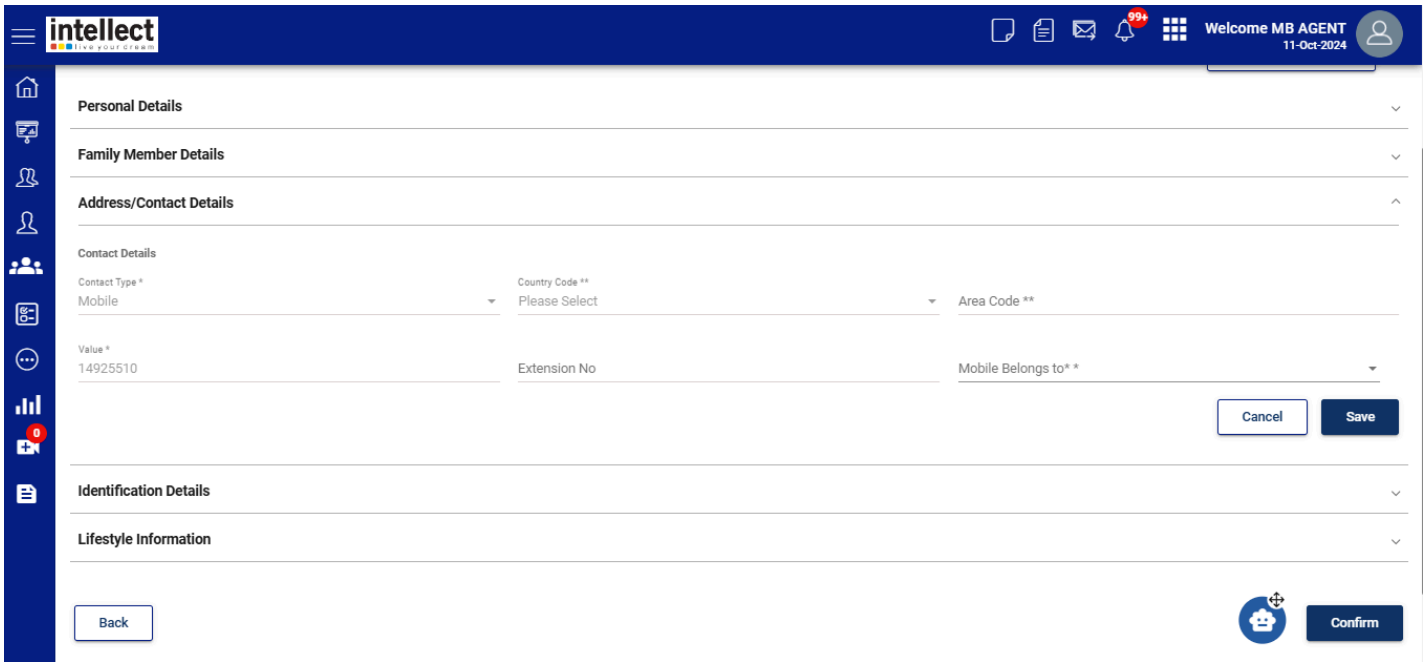
Screen: View Address Details Card



Screen: View Address Details

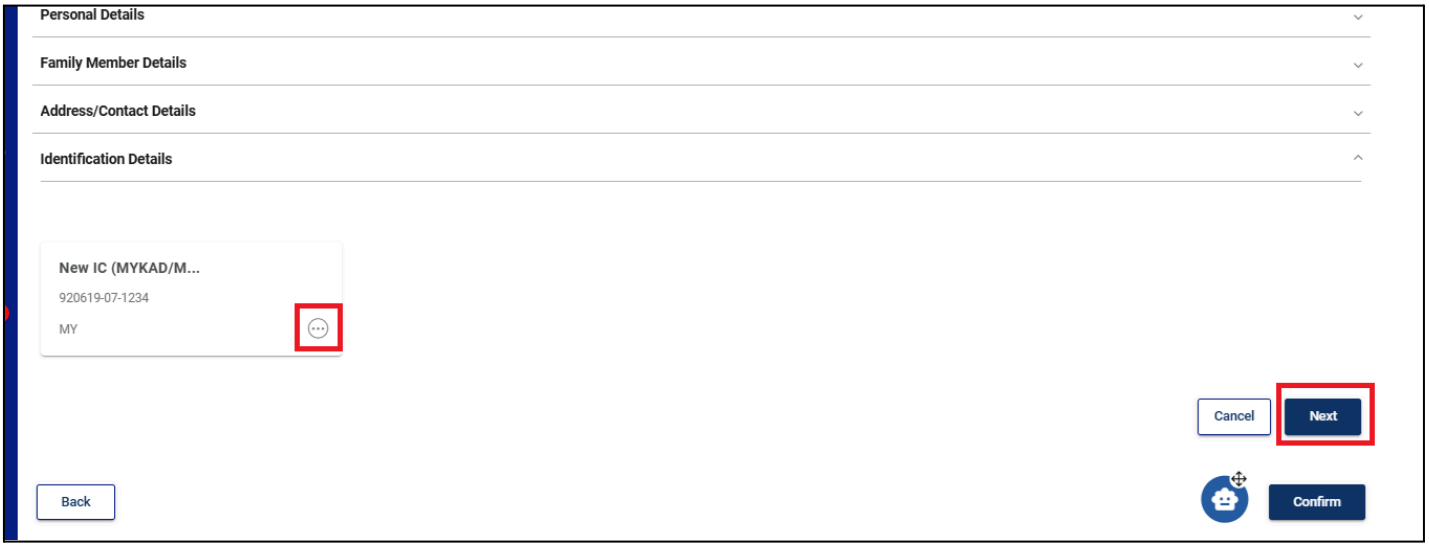


Screen: View Contact Details

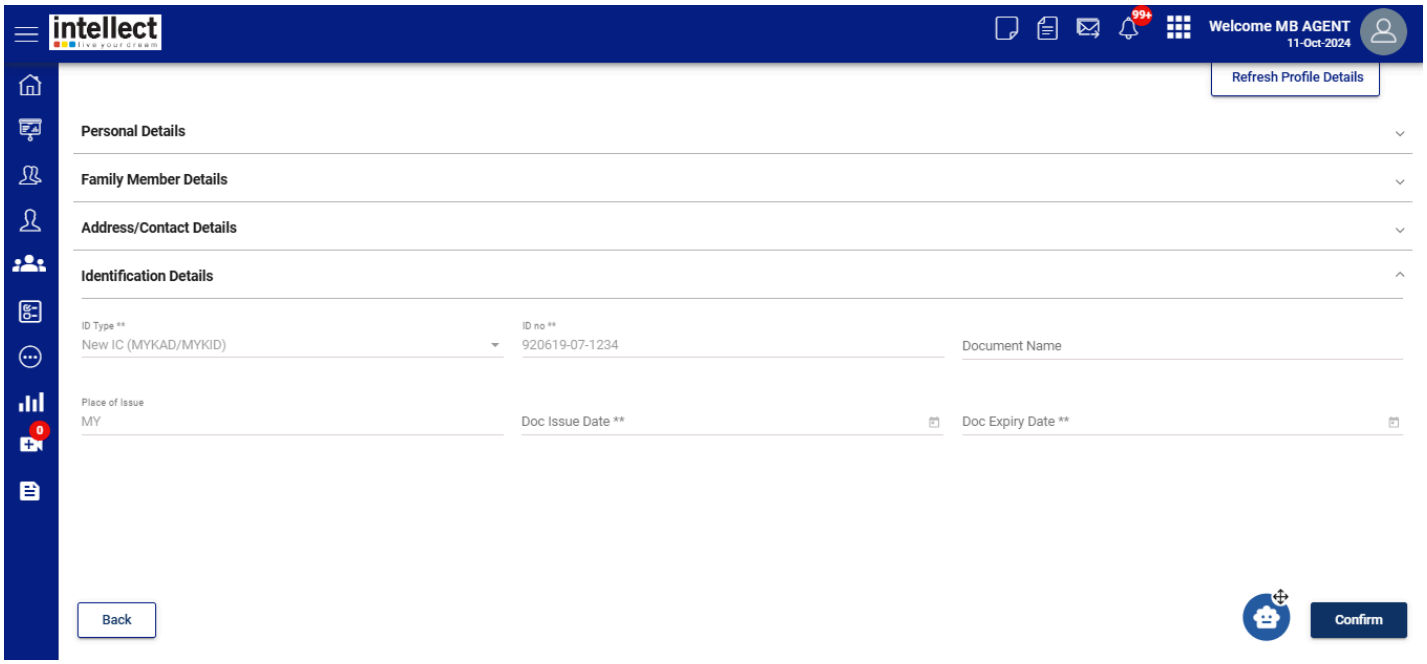


Screen: View Contact Details

- **Identification Details** - View Identification details of the Customer
  a. The user can view Identification details of the Customer in this section by clicking on the three dots. Once the user has seen the details, they can click on the "Confirm" button
  b. The user can then click on the "Next" button to navigate to the next section

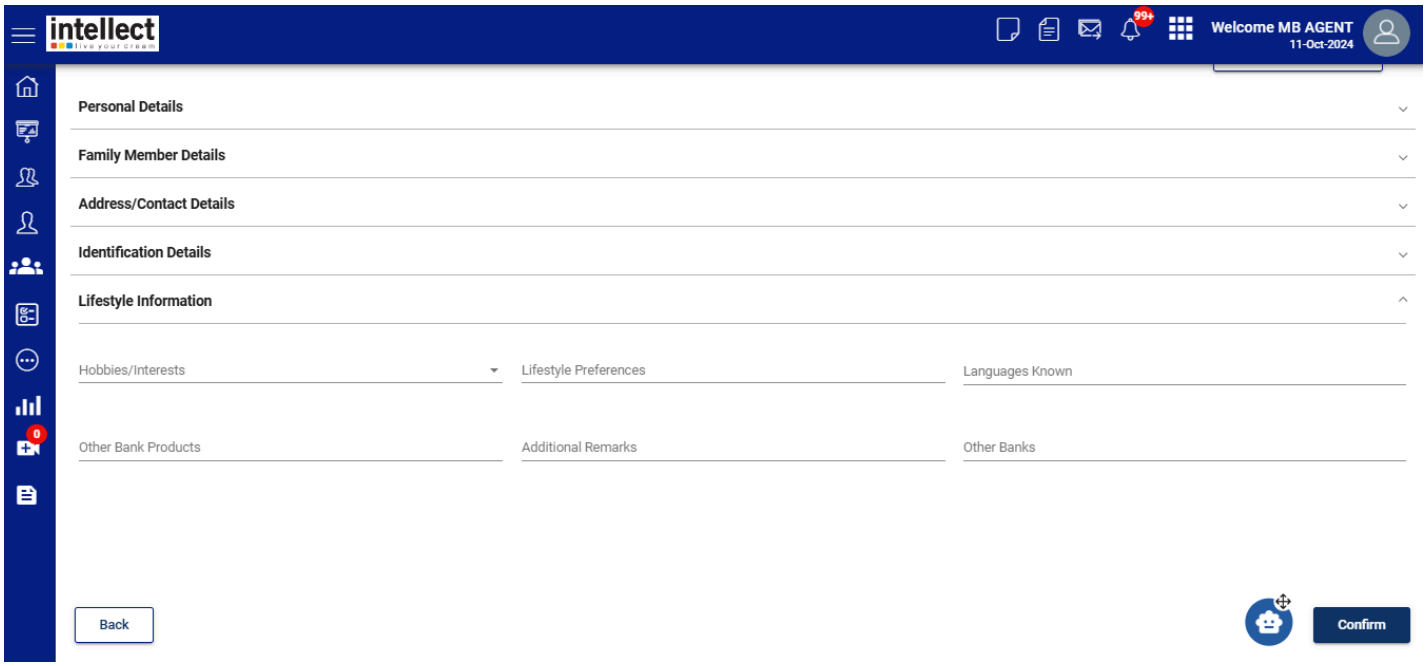


Screen: View Identification Details Card



Screen: View Identification Details

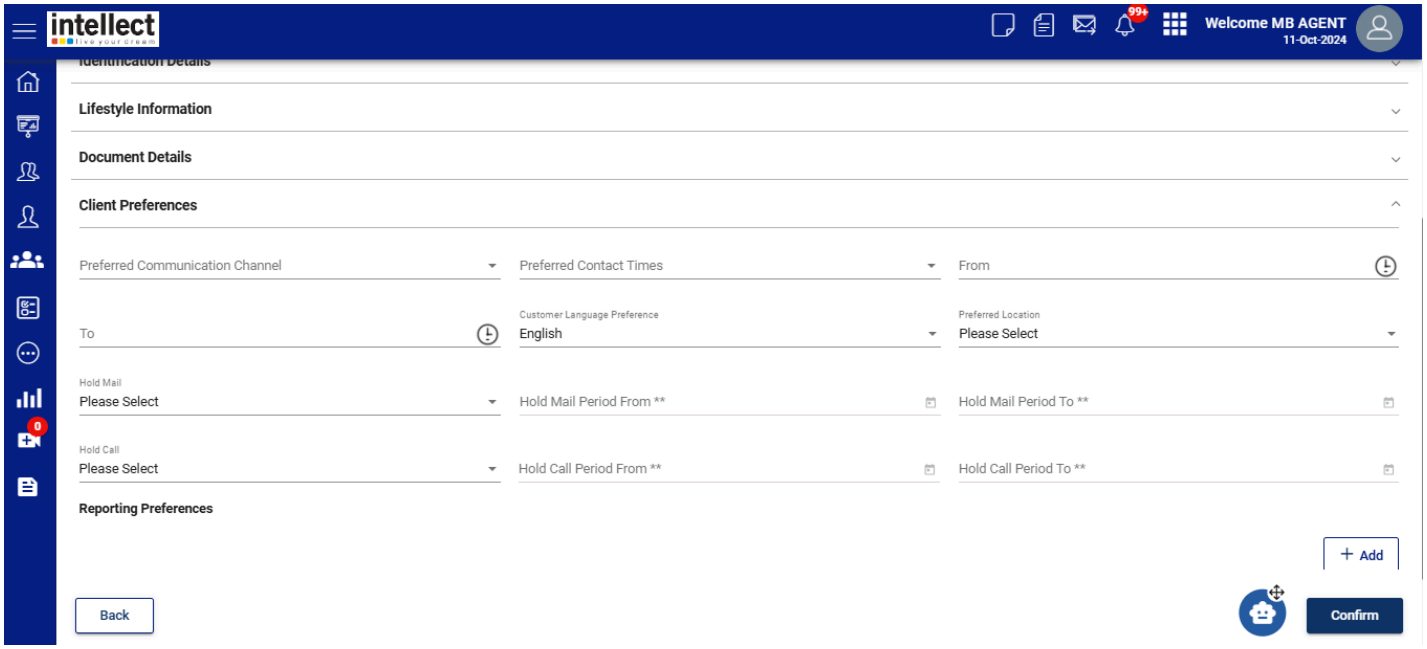
- **Lifestyle Information** - View/Modify Lifestyle Information of the Customer
    a. Once the user has viewed/updated/modified the Lifestyle Information, they can click on the "Next" button to navigate to the next section



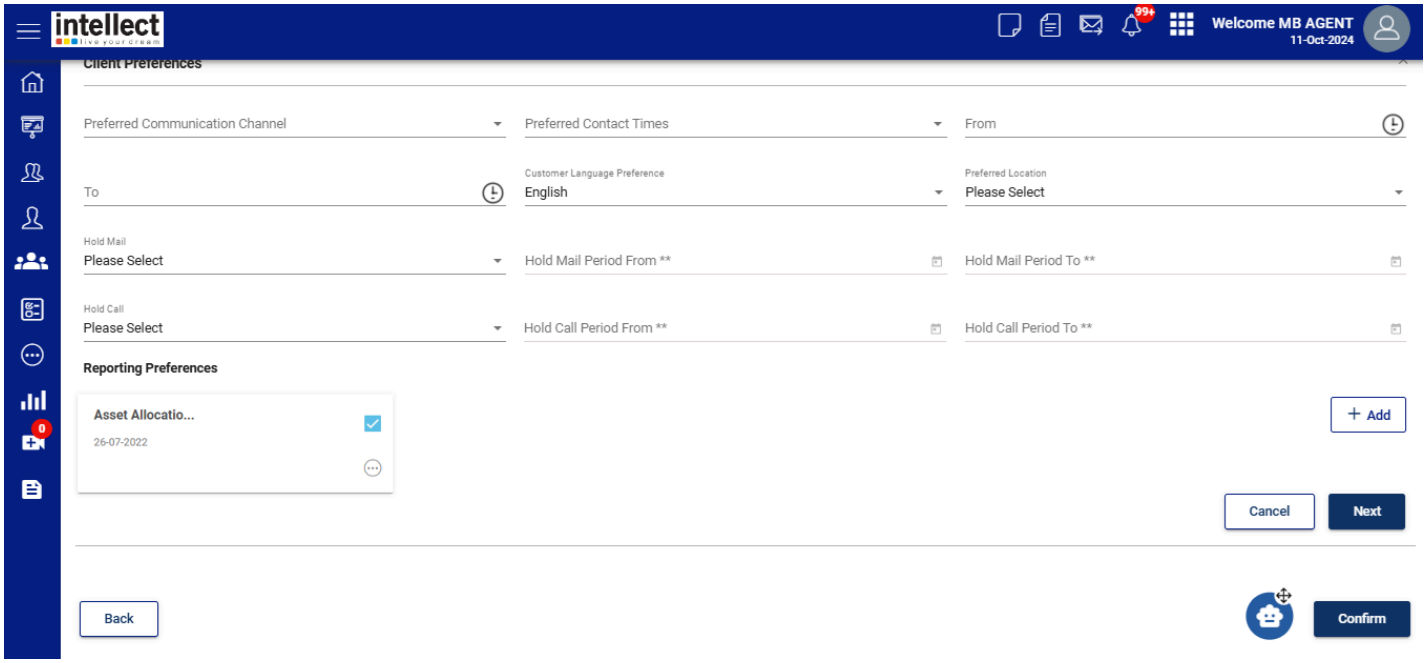
Screen: View/Add/Modify Lifestyle Information

- **Client Preferences** - View/Update/Modify Communication Preferences and Reporting Preferences of the customer
    a. The user can View/Update/Modify communication preferences of the customer in this section
    b. The user can also add/view/modify reporting preferences of the customer
    c. The user can add reporting preferences of the customer by clicking on the "+Add" button and clicking on the

"Save" and then "Confirm" button to add the reporting preferences. This reporting preference can now be viewed as a card and modified if needed

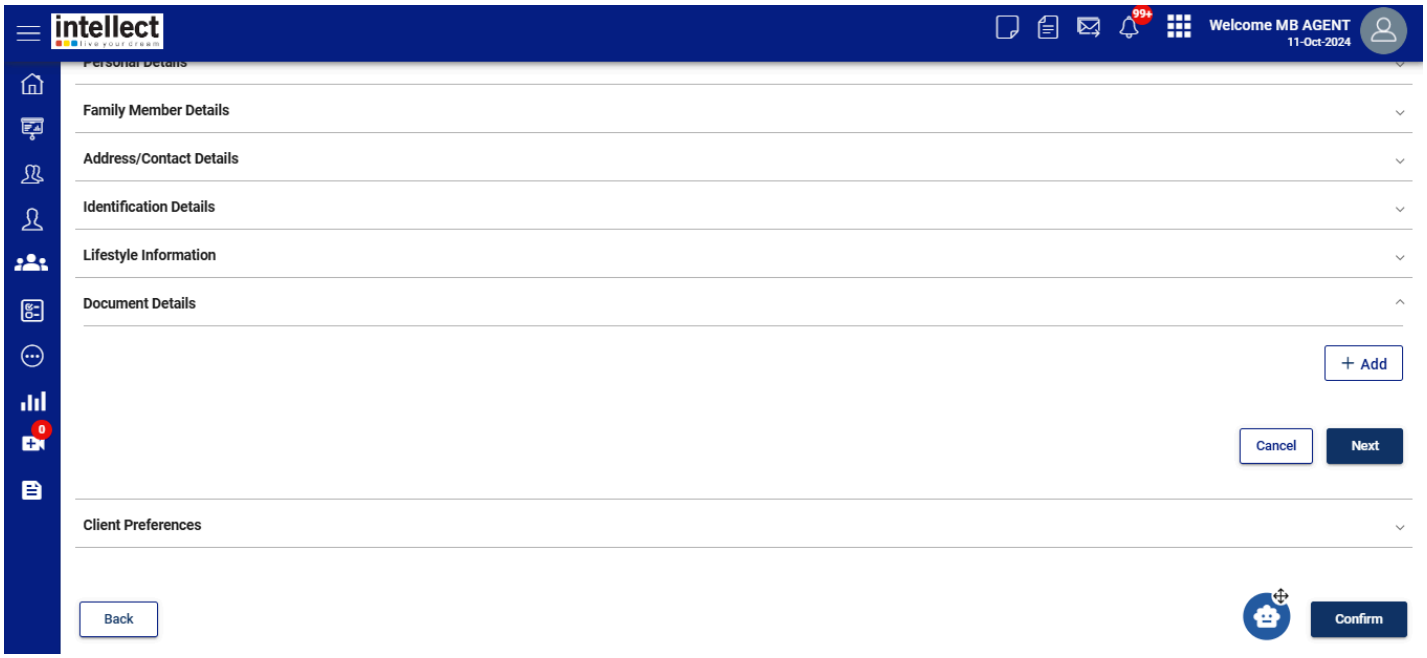


Screen: Add/View/Modify Client Preferences



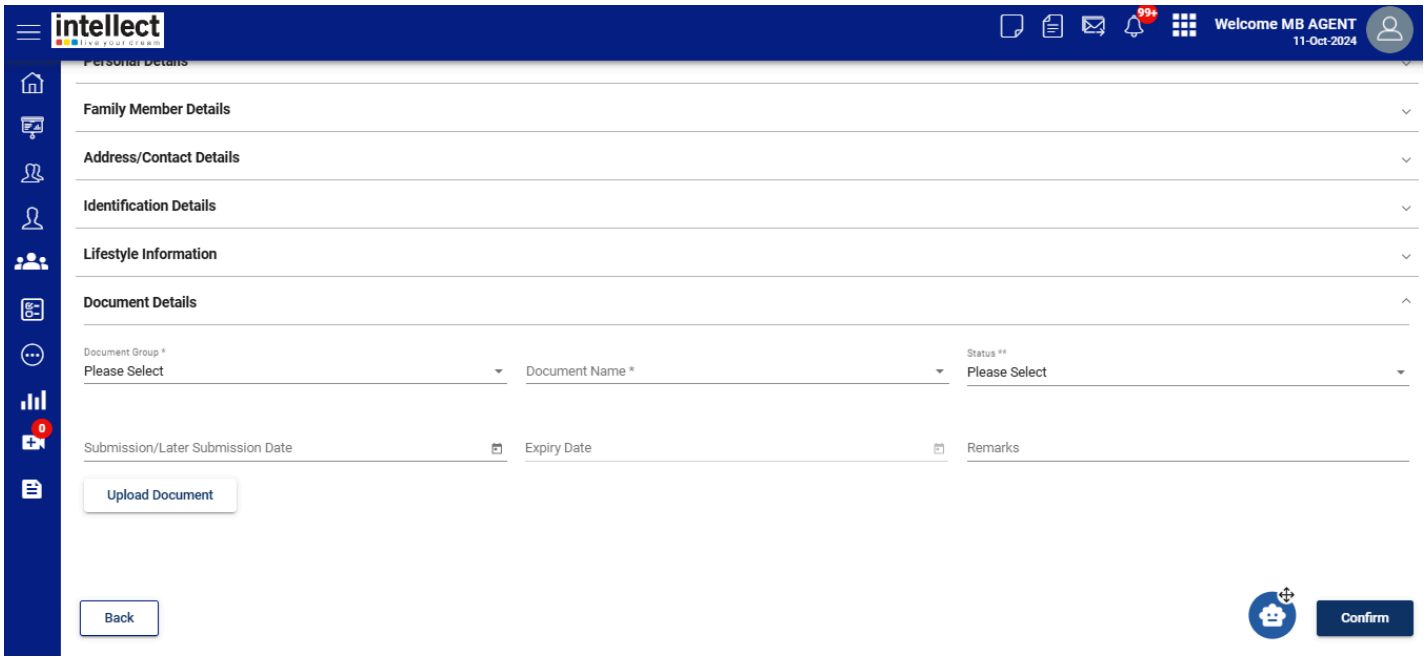
Screen: Add/Delete/Modify Reporting Preferences

- **Document Details** - Add documents related to a customer
    a. The user can upload documents related to the customer by clicking on Add.



Screen: Add documents

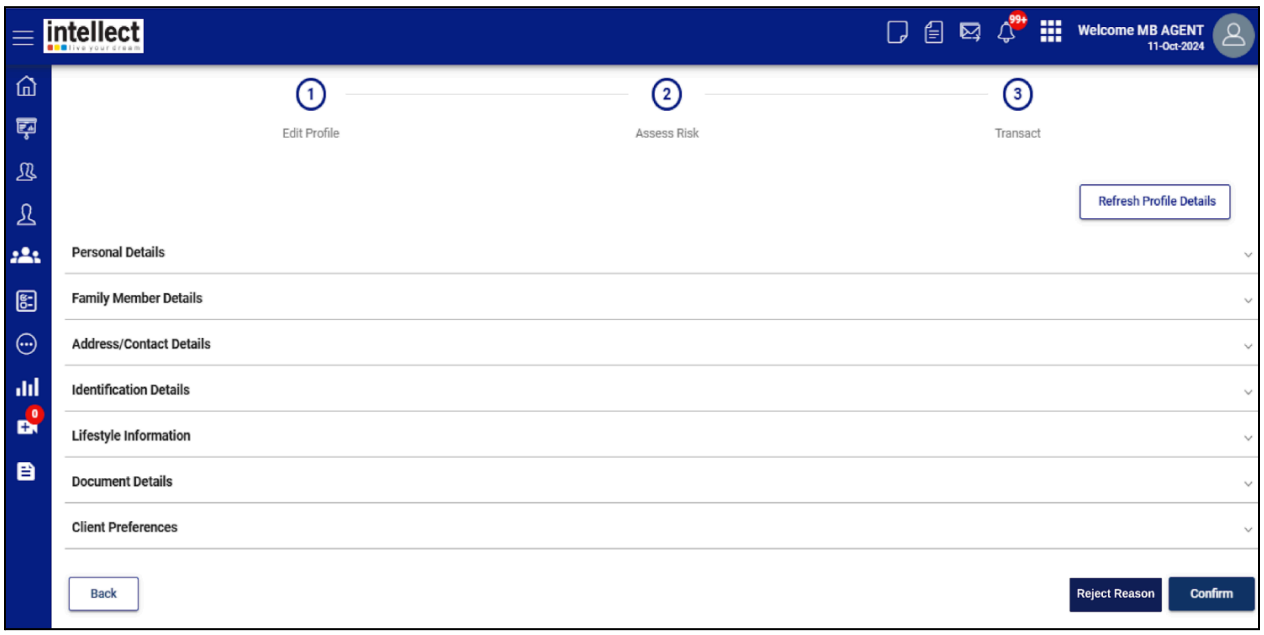
b. After clicking “Add” user will input the details of the document and click on upload.



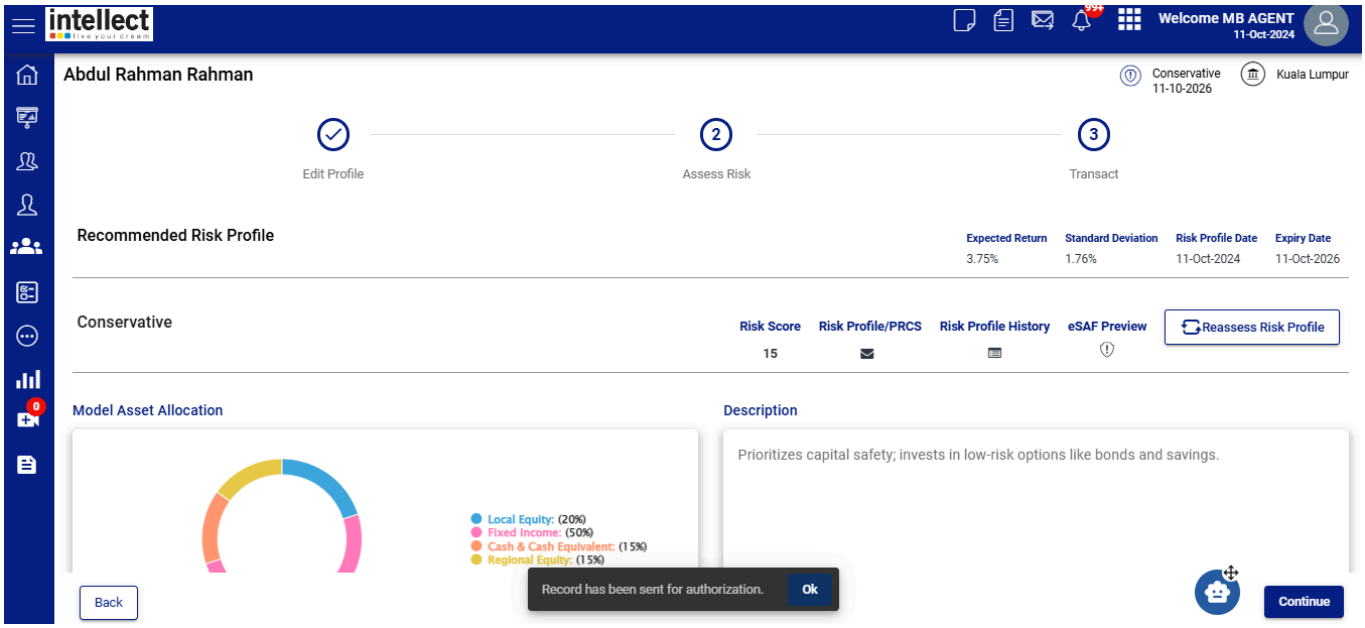
Screen: Upload documents

c. After the user has entered/modified the relevant details in these sections, they can click on the “Confirm” button and the record would be sent for authorization. Users will be redirected to the “My Customer” screen if the risk profiling of customers is not done. If risk profiling already exists for the customer, the user will land on the “Risk Profile” screen

d. If in the past, supervisor has rejected the customer profile record then user can see the rejection reason by clicking on the “Reject Reason” button

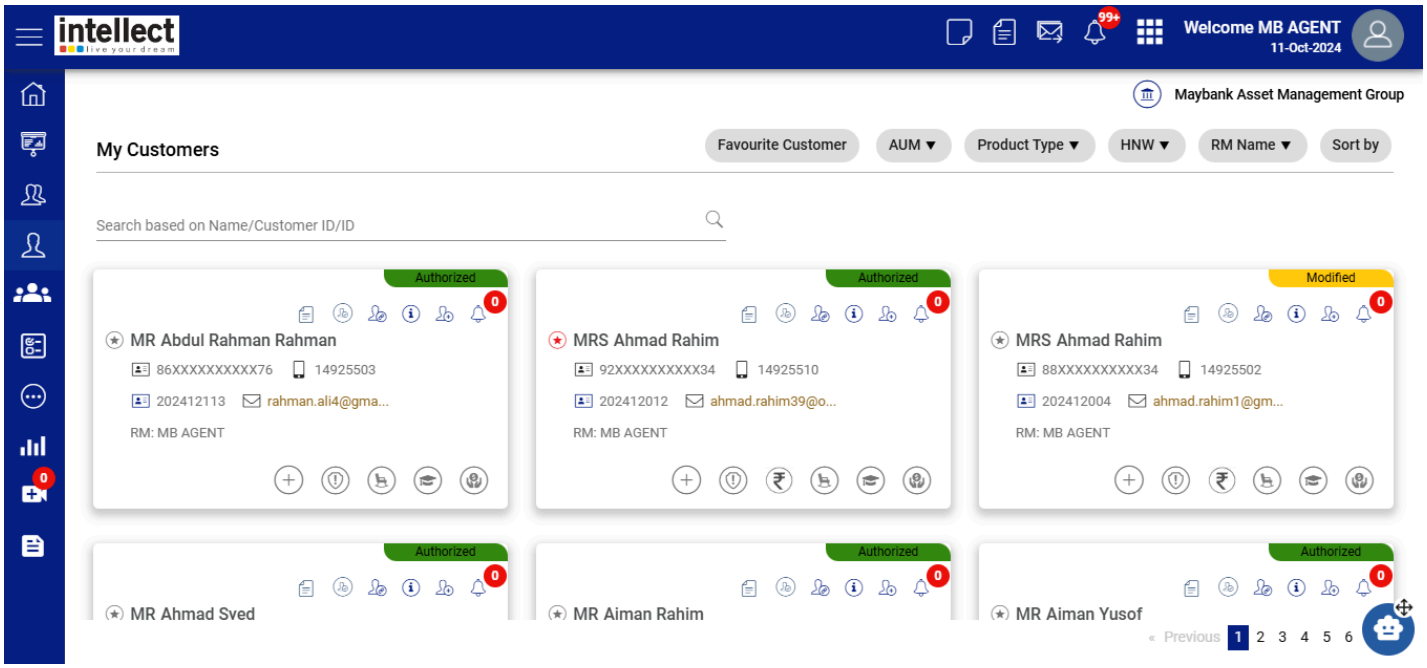


Screen: Confirm Customer Details



Screen: Record sent for authorization

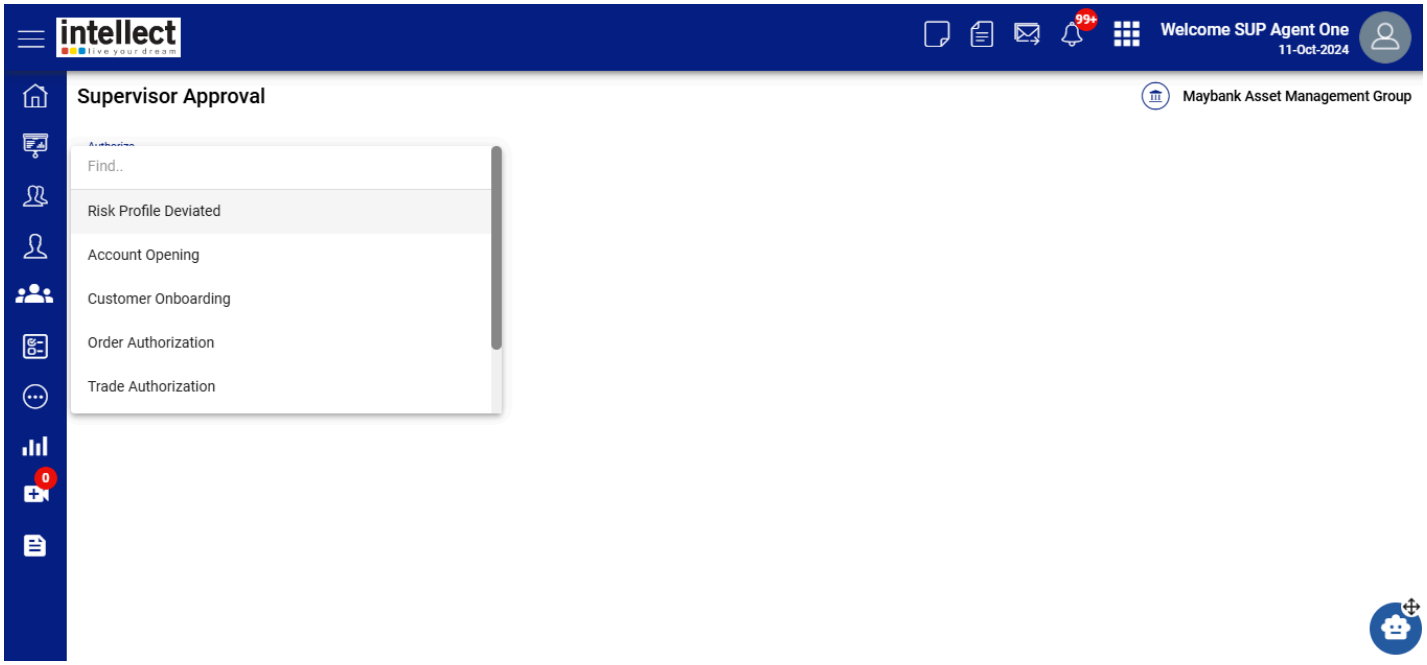
e. Once all the desired details are filled in, User will click on “Confirm” to save the details in the system.
f. On clicking the “Confirm” button, the system will display the below message
g. “Record has been sent for authorization”
h. Till the time the record is authorized, on the customer card in My customers will display the status as “Modified”



Screen: Customer Card Status

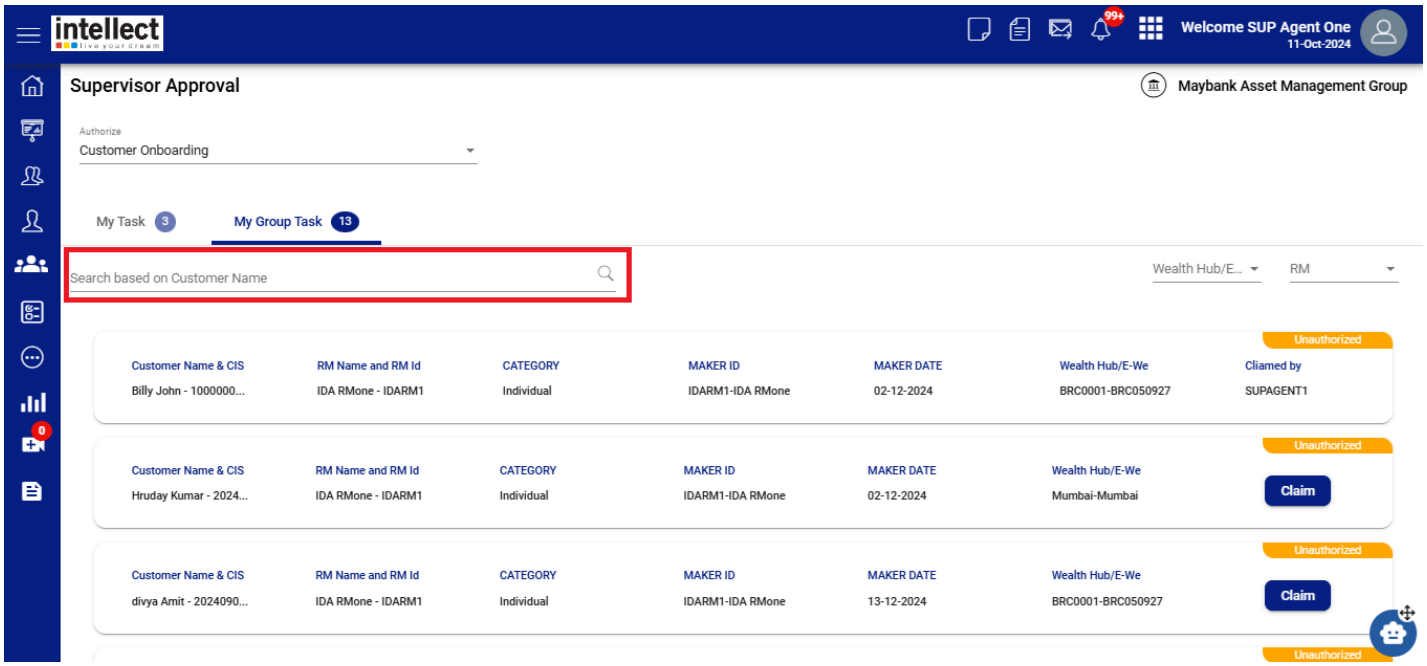
3.3. Supervisor Approval

1. The on boarded customer record can be authorized by any other Checker User except the maker
2. To authorize, the checker has to log into the application and navigate to Agent Portal
3. Checker will then click on to navigate to the authorization screen
4. Checker will then select "Customer On-boarding" from the Authorize list



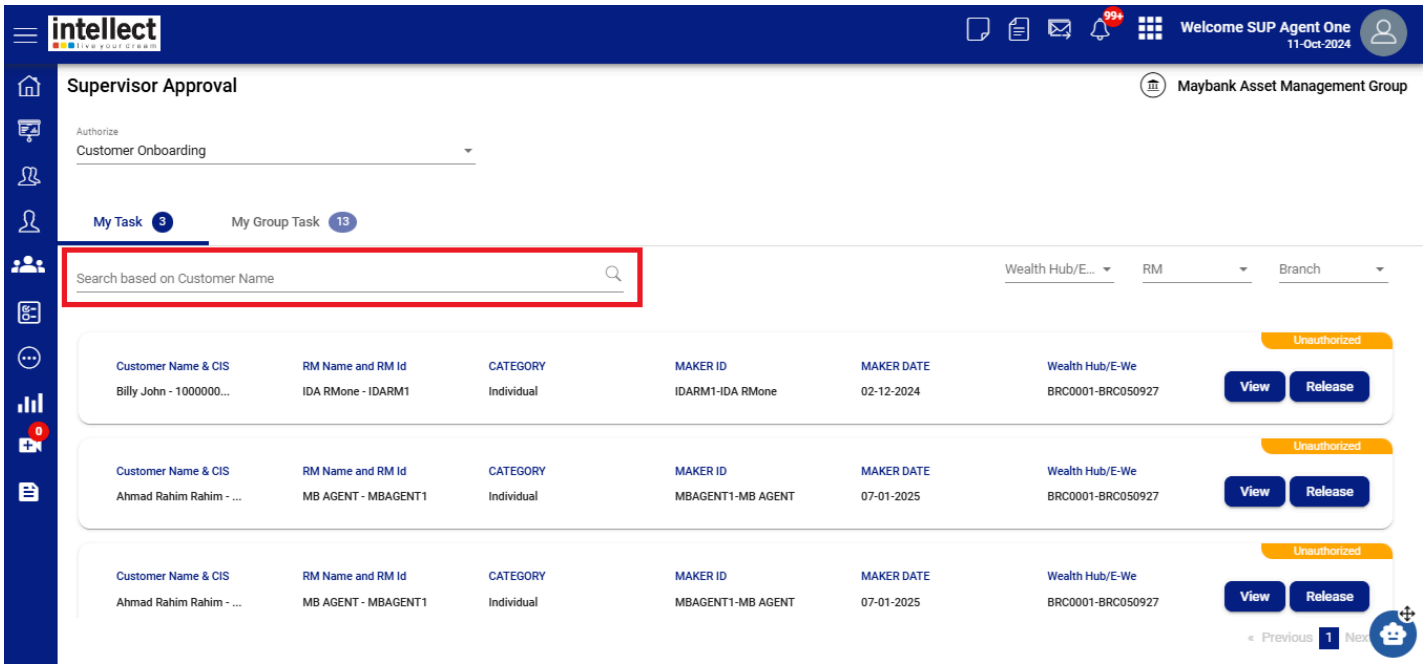
Screen: Checker Authorize menu

5. The authorization screen will load up with 2 sections “My Group Task” and “My Task”
6. The “My Group Task” will display all the records that are currently pending for authorization
7. The Agent filter will display all the customers mapped to the selected Agent
8. The checker will also have the option to search for a specific customer by typing in the name
9. The checker can select the desired customer card and click on “Claim”



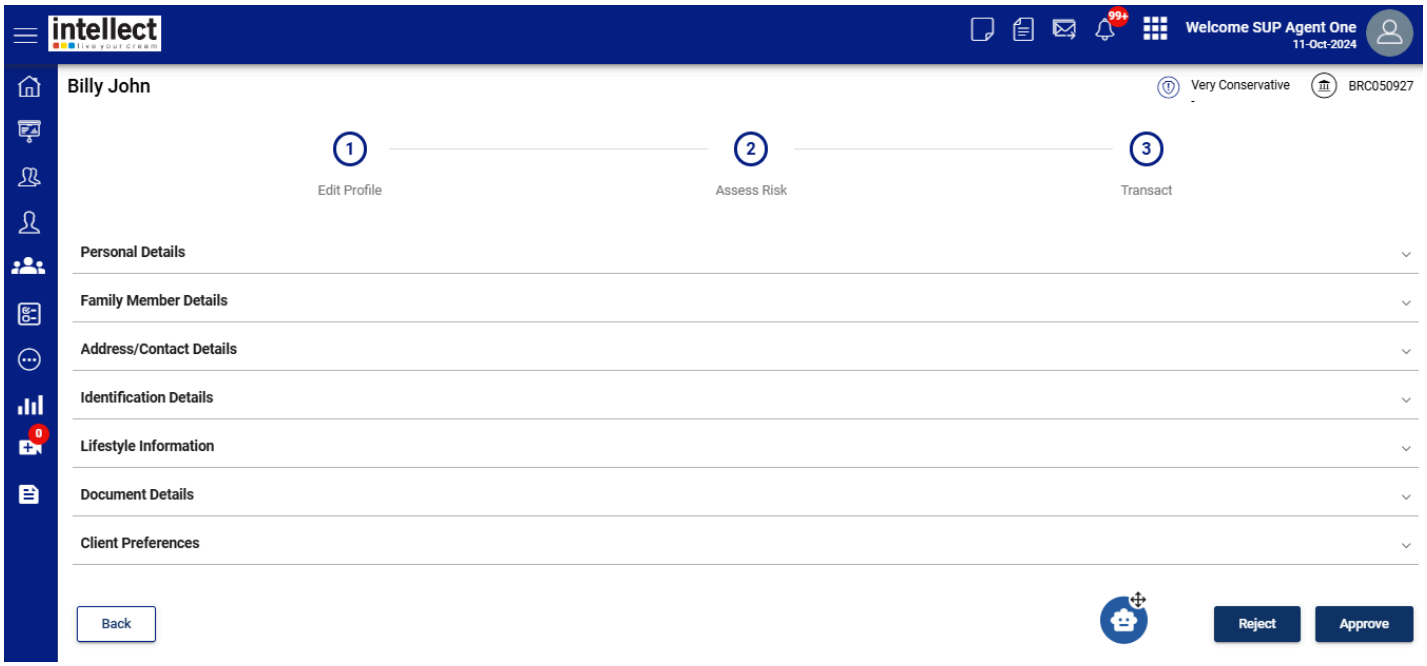
Screen: Authorization – My Group Task

10. The customer card will then move to the “My Task” section
11. Checker will have the same option to filter or search as mentioned above. In the “My Task” section, the checker can search for the desired customer card and click on “View”



Screen: Authorization – My Task

12. The customer profile details will be displayed for the checker to review
13. To authorize the record, the checker can click on “Authorize”
14. To reject, the checker can click on the “Reject” button

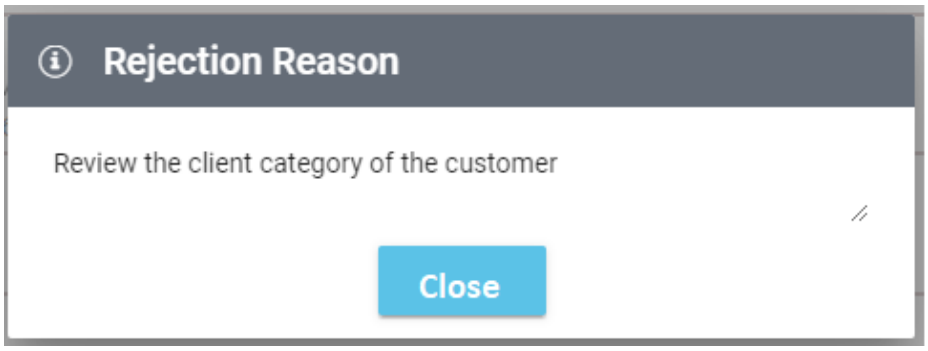


Screen: Customer Authorization page

15. System will prompt the supervisor to enter the reject reason
16. Checker can enter the appropriate reject reason and click on Submit

Screen: Checker to enter the reject reason

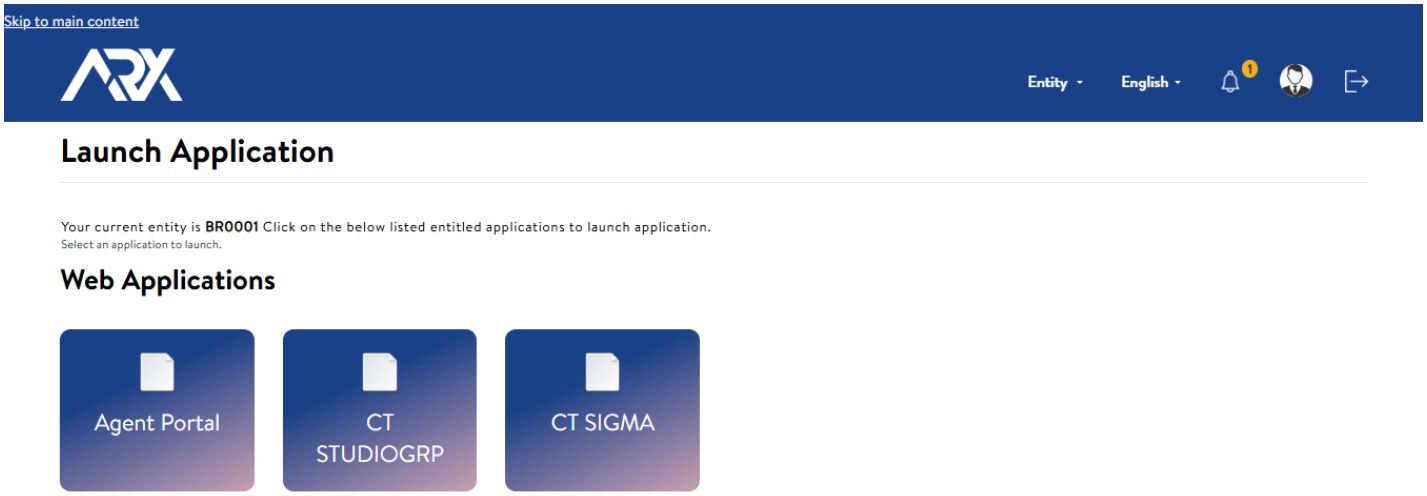
17. To view the reject reason, the checker can navigate to the customer profile details
18. Checker can scroll to the bottom of the screen and click on reject reason
19. A new window will pop up wherein the reject reason will be displayed



Screen: Rejection Reason preview

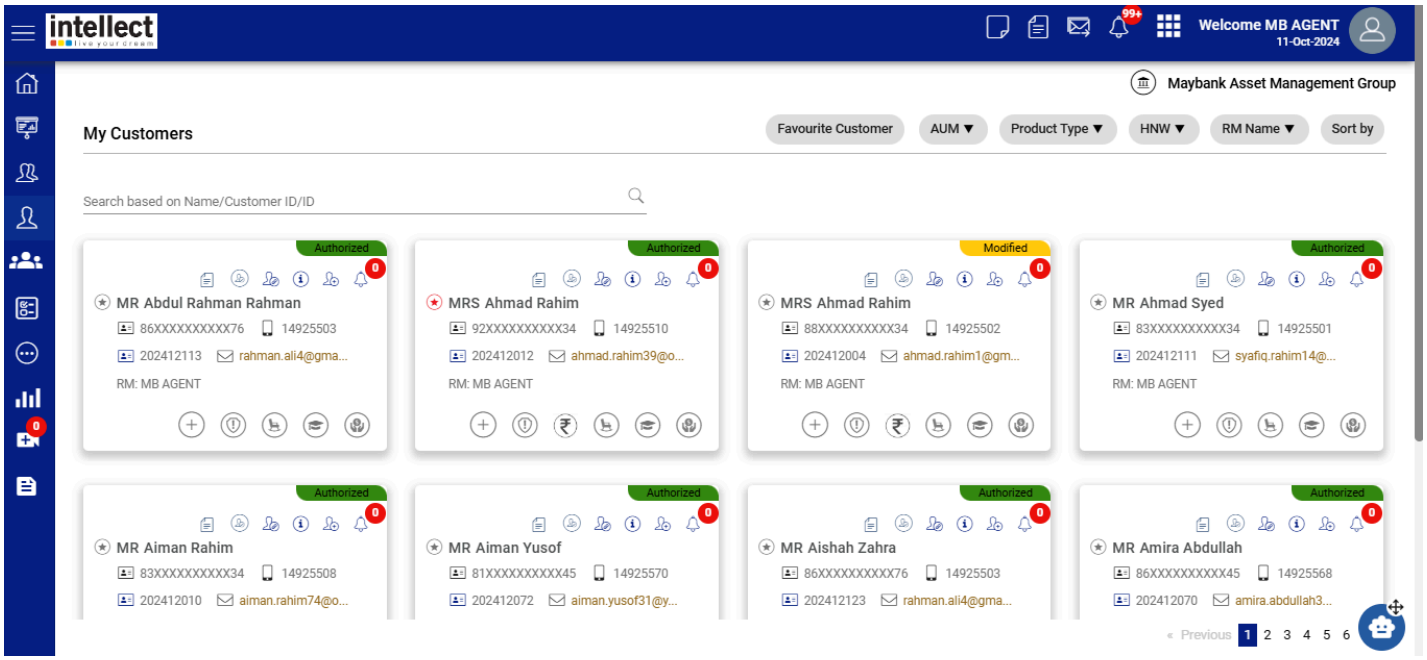
3.4. Accessing Customer card by Secondary Agent

1. User will log into the application and navigate to Agent Portal



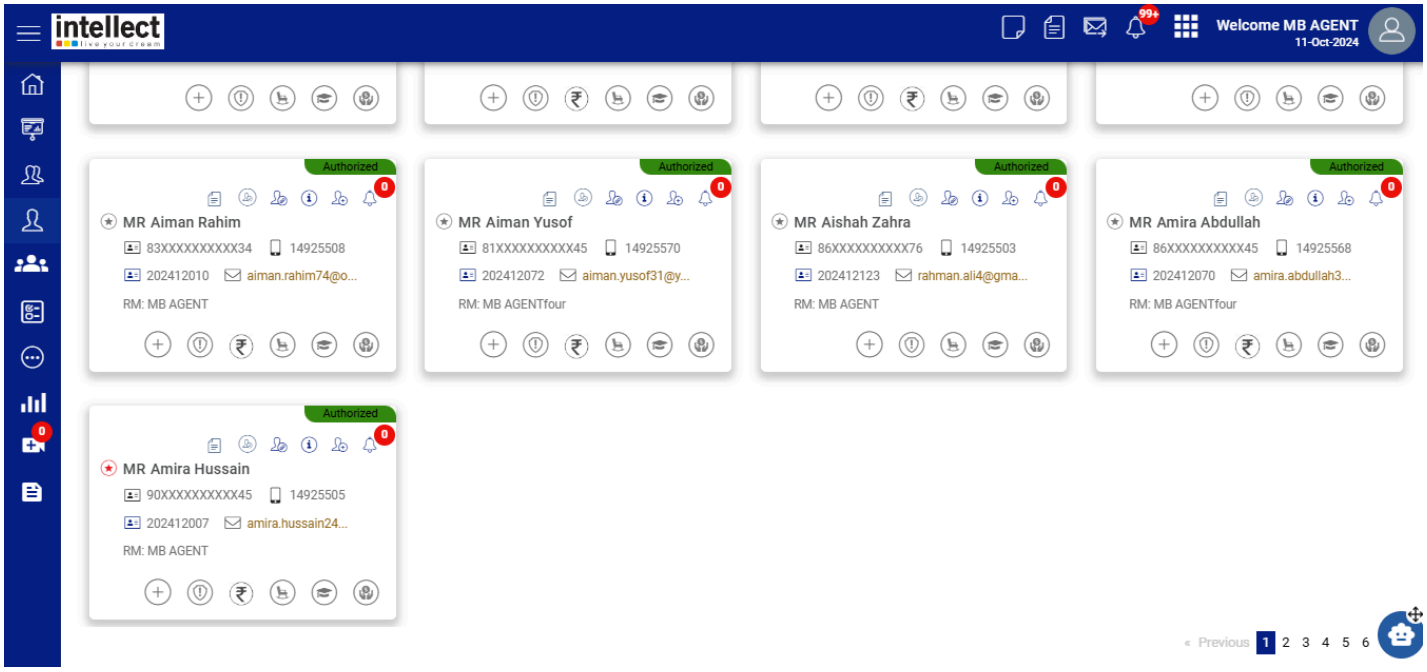
Screen: Navigate to Agent Portal

2. User will then click on icon to navigate to the My customers page



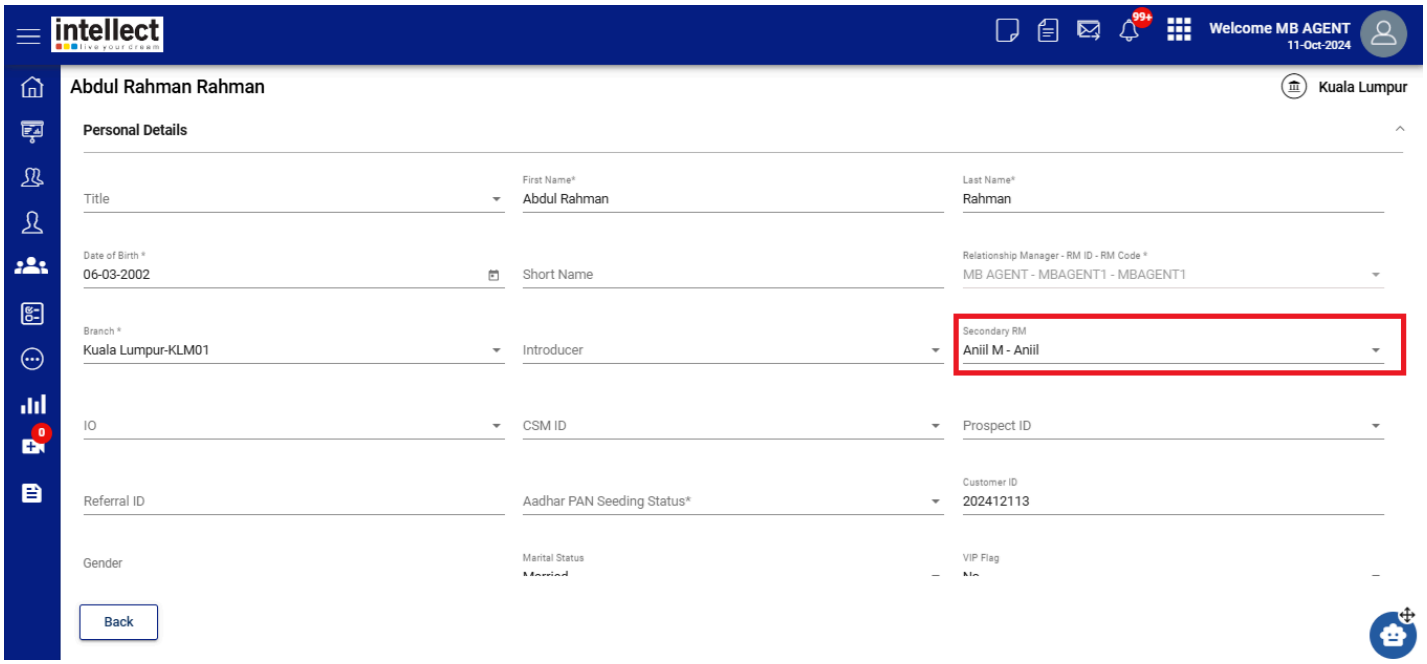
Screen: Navigate to My Customers

3. User will be able to see the customer where he is a Primary Agent or a Secondary Agent for the customer



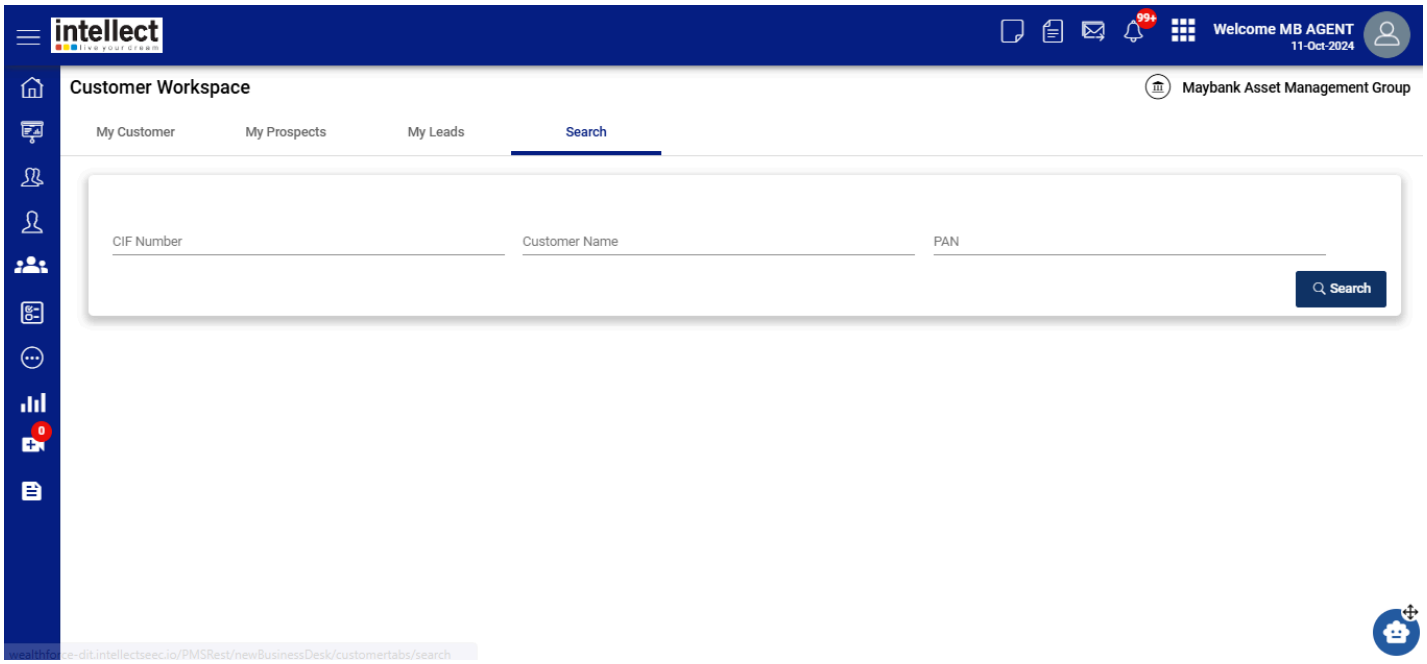
Screen: Customer where user is Secondary Agent

4. User will go to Personal details and Secondary Agent information will be displayed.



Screen: Secondary Agent mapping to customer

5. User will only be able to access a customer card if he/she is mapped as either the Primary Agent or Secondary Agent
   i) There will be no change in the Agent dashboard; the data for the Agent dashboard will continue to be populated as per the Primary Agent mapping as it exists.
   ii) User will be able to access any customer cards from global search as well



Screen: Agent can Search the customer

iii) In the customer cards, the Agent who is mapped as the secondary can view the customer attributes

3.5. Agent Assignment

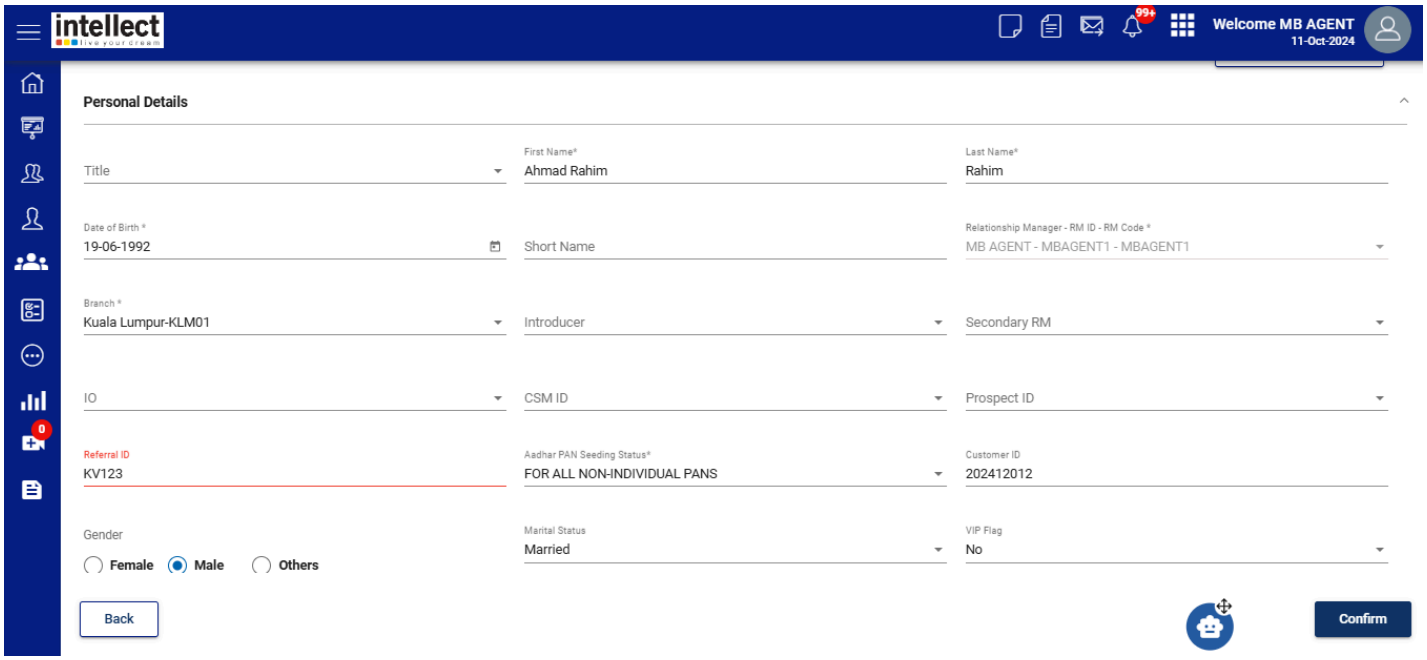
1. Whenever a customer is getting on boarded in the App, there would be a provision to enter a referral code
2. Referral Codes logic is as explained below
    a. Referral Code would be generated outside Intellect system
    b. Referral Code validation would be outside Intellect system
    c. Referral Code should be for an individual (Agent)
    d. Expiry of Referral Code would be handled outside the Intellect system. Ops user will have to update the Agent's referral code manually.
    e. One Agent can have multiple referral codes assigned to him. There would be a provision in the User Master to save the referral code. Maintenance of the referral code for Agent's would be done manually by the Ops team. There would be a section "Referral Code" where the user can maintain multiple codes for the Agent

Screen: User Details maintenance

Screen: Capture referral code

f. 2 Agents can't have same referral code mapped to them
g. Customers can enter only one referral code at the time of on boarding and this will be saved in the customer profiling details. There is no other provision to enter the referral code apart from on boarding

2. At the time of on boarding, customers would enter one referral ID. If there is no referral code entered by the customer then this field would be blank. This referral code will be stored at customer level.



3. If the system finds a match, then that Agent will be assigned to the customer, else the appropriate error message will be shown and the customer will be allowed to continue with the on boarding process

4. Field Level details

Field Name	Description	Input type	Input (Yes/No)	Data type	Mandatory (Yes/No)	Remarks
Title	Selects the title of the customer	Select	Yes	String	Yes	List of titles can be maintained
First Name	Inputs the name of the customer	Input	Yes	String	Yes	Not Applicable
Last Name	Inputs the name of the customer	Input	Yes	String	Yes	Not Applicable
