1. Introduction

Service Request allows the customer to utilize services given by the bank outside the branch. It also allows the bank and customer to track the service request throughout its life cycle. Service Requests can be initiated by a Relationship Manager/Customer. Below document illustrates the service request initiated by the customer. When a service has to be consumed by a customer, the customer creates a service request in the system. After that RM meets with the customer, collects the necessary document and submits it in the bank. Once the documents are submitted, the service request is executed by a branch staff.

The journey of customer request is divided into two steps below

a. View Service Request
b. Initiate Service Request

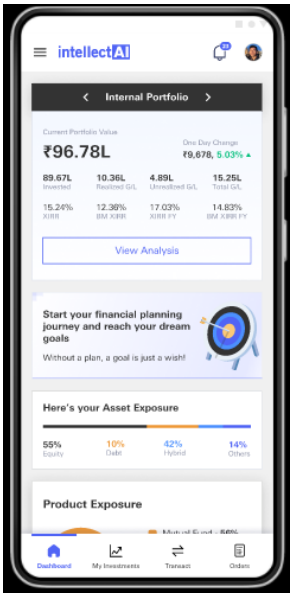
The purpose of this document is to guide the user through the service request journey in the application.

2. Prerequisites

S No	Process	Reference Document
1	Customer Onboarding	Journey of Lead to Prospect and Prospect to Customer
2	Adding the Service Request Type in General Parameters	Journey of Customer Request to Request Closure -
3	Service Units should be defined for selecting the Initiator and Resolver Service Units	Journey of Defining Maintenance
4	Maintain Service Request Type Definition	Journey of Customer Request to Request Closure

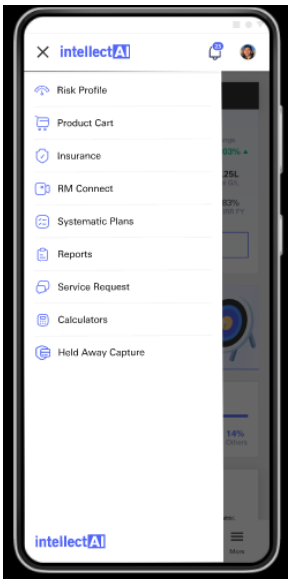
3. Process Flow

1. Once logged in, the customer will see the below mentioned screen.

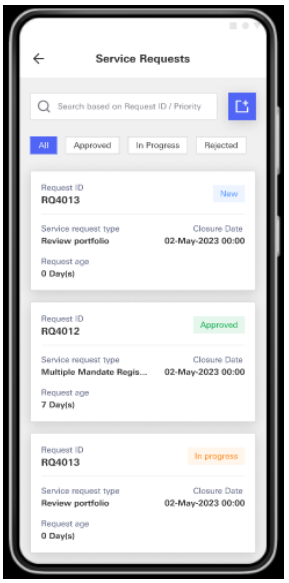


Screen: Dashboard Login screen

2. Customers can navigate to the Service Request screen by clicking on the service request tab on the left Burger icon



Screen: Select Service Request



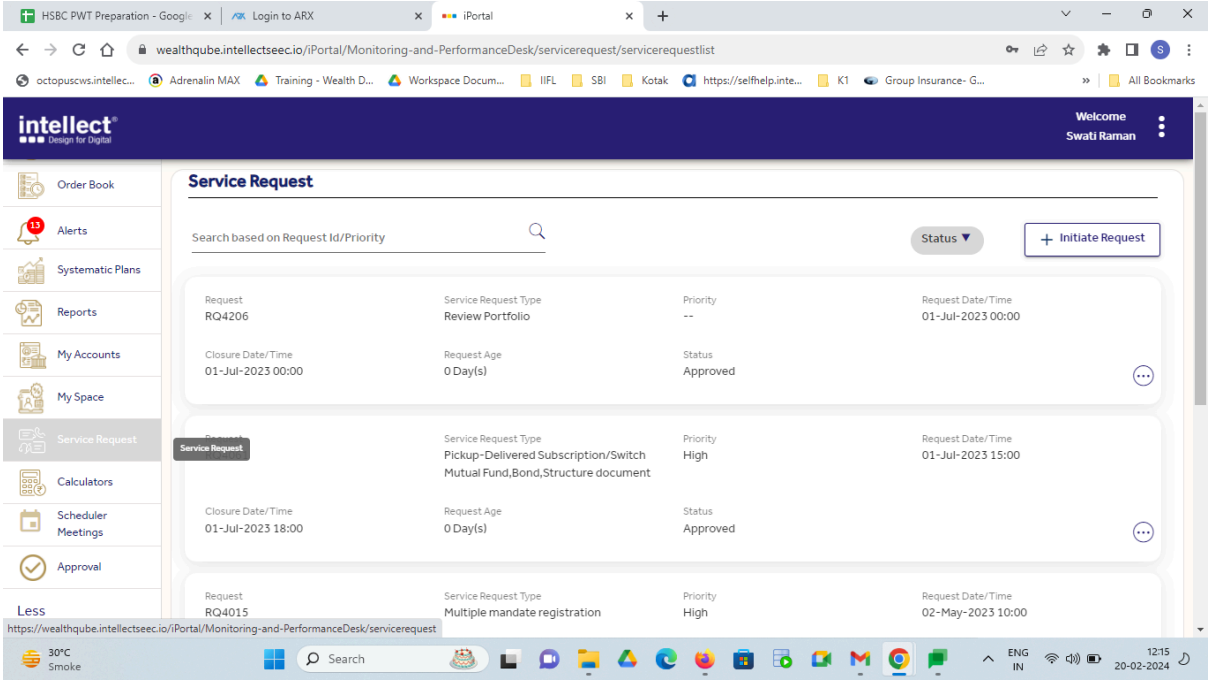
Screen: View all Service Requests

3.1 View All Service Requests

All the service requests initiated by the customers and service requests initiated by the RM on behalf of the customer from RM Office can be viewed in the app. The customer can perform the following actions in Initiate Request:

a. Initiate Service Request
b. View/Modify Initiated Service Request

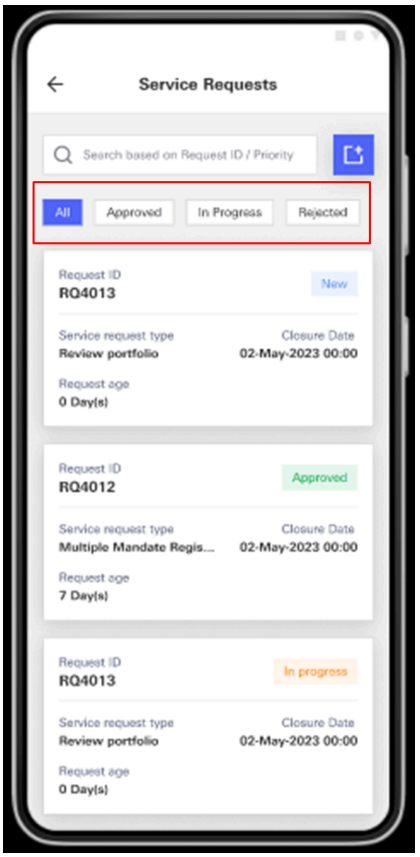
1. Customer selects the “Service Request” icon available on the left navigation panel to navigate to the “View all Service Requests” screen



Screen: View All Service Requests Navigation

2. Customer views all the service requests initiated with Service Request Type, Request ID, Status of the request etc. Service Requests can be searched using Request ID and Priority.

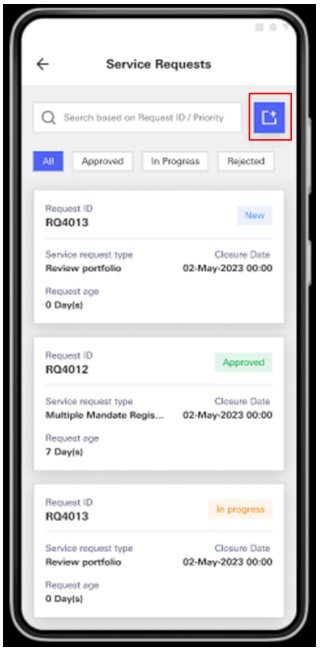
3. Customers can filter the service request records by status. Status here refers to service request status like New, Approved, and Ready for Teller Approval, Completed etc.



Screen: View All Service Requests Navigation

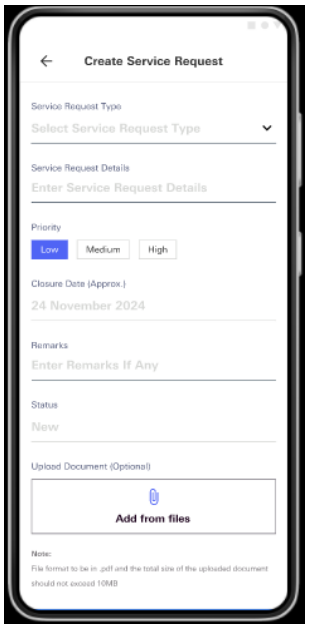
3.2 Initiate New Service Request

1. Customer clicks on “Initiate Request” to initiate the service request.

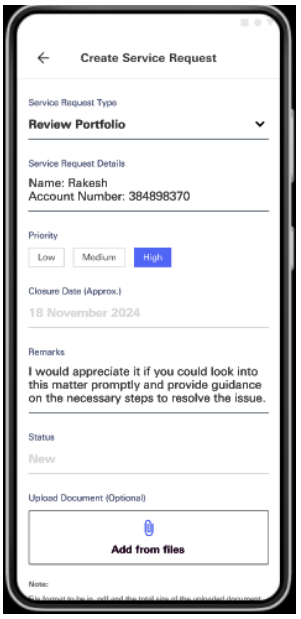


Screen: Initiate Service Request

2. Customer initiates the service by selecting the service request type and all the necessary details. The customer shall submit the form after filling up all the applicable fields by clicking on the “Save” button.



Screen: Create Service Request



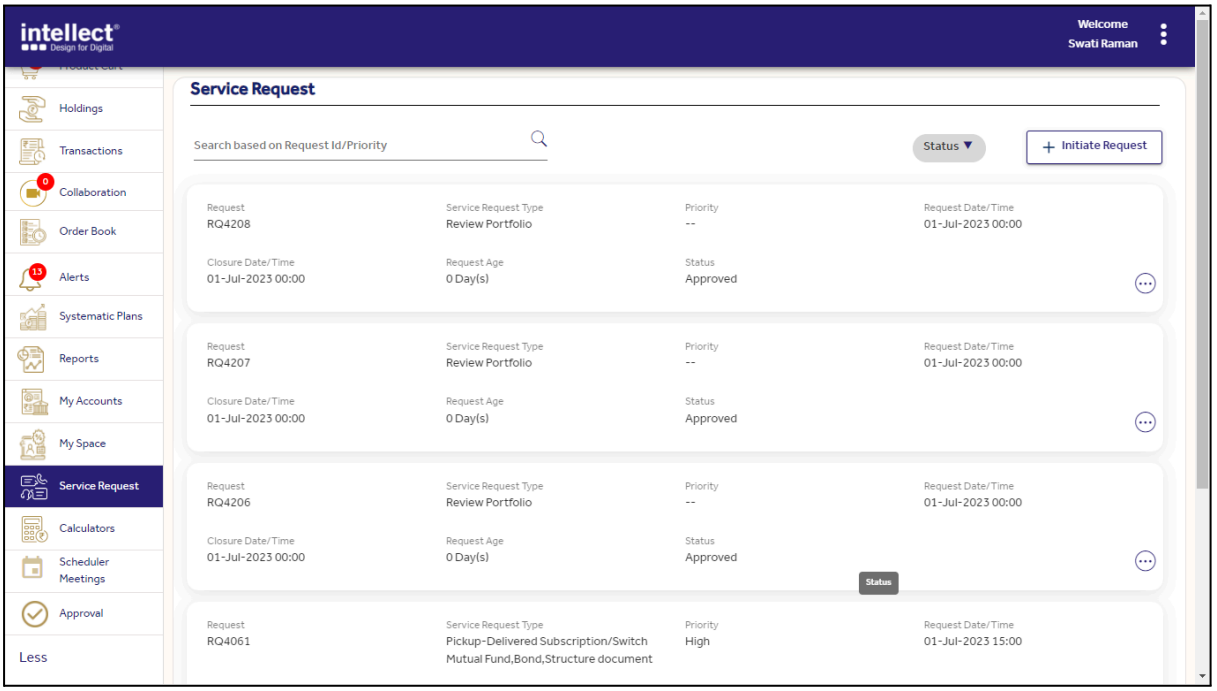
Screen: Create Service Request

3. Service Requests initiated by the customer are auto approved by the system. The status of the record will be “Approved”. System will give below confirmation message-

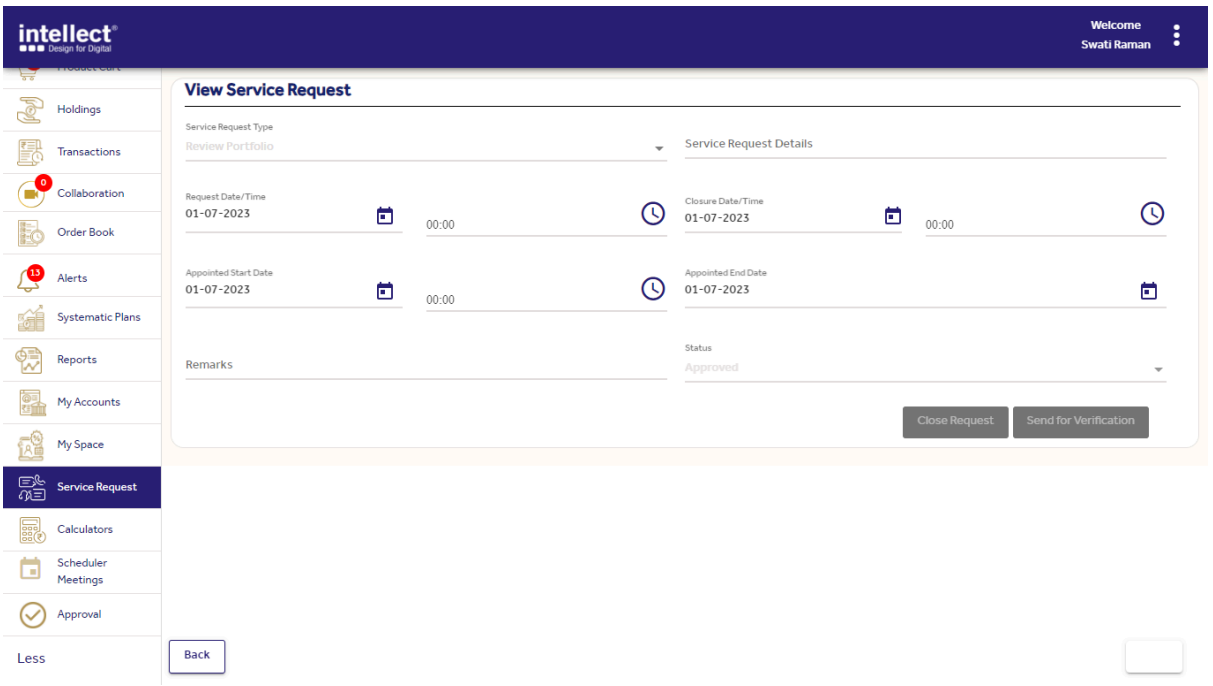
   “<<Request ID>> is successfully submitted for processing. To view the status or to make modifications, use the Request ID mentioned.”

3.2.1 View/Modify the Service Request in “Approved” Status

1. Service Requests created by the customer will be visible in the “Service Request” queue of the mapped RM in the RM Office. In the journey of creating service request to request closure, the job of the customer is only to initiate the service request and rest of the steps to be completed by the RM from the RM Office
2. Customers can track the status of the service request from the Service Request Queue from the Client App. System also enables the customer to modify the service request on behalf of the RM from the client app in exceptional situations
3. Once a Service Request is created by the customer, RM can meet the customer to collect the relevant documents required for the service request. RM fills the remaining details like Service Branch, Resolution Unit, Sales Date, document upload and send this request to the teller/branch staff for service request resolution by clicking on the “Send for Verification” from the RM Office
4. Service Requests initiated by the customer are auto approved by the system. If the customer accesses this service request when the status is “Approved”, the fields which were displayed to the customer at the time of request initiation will be displayed if the customer views/modifies the Service Request in “Approved” status.

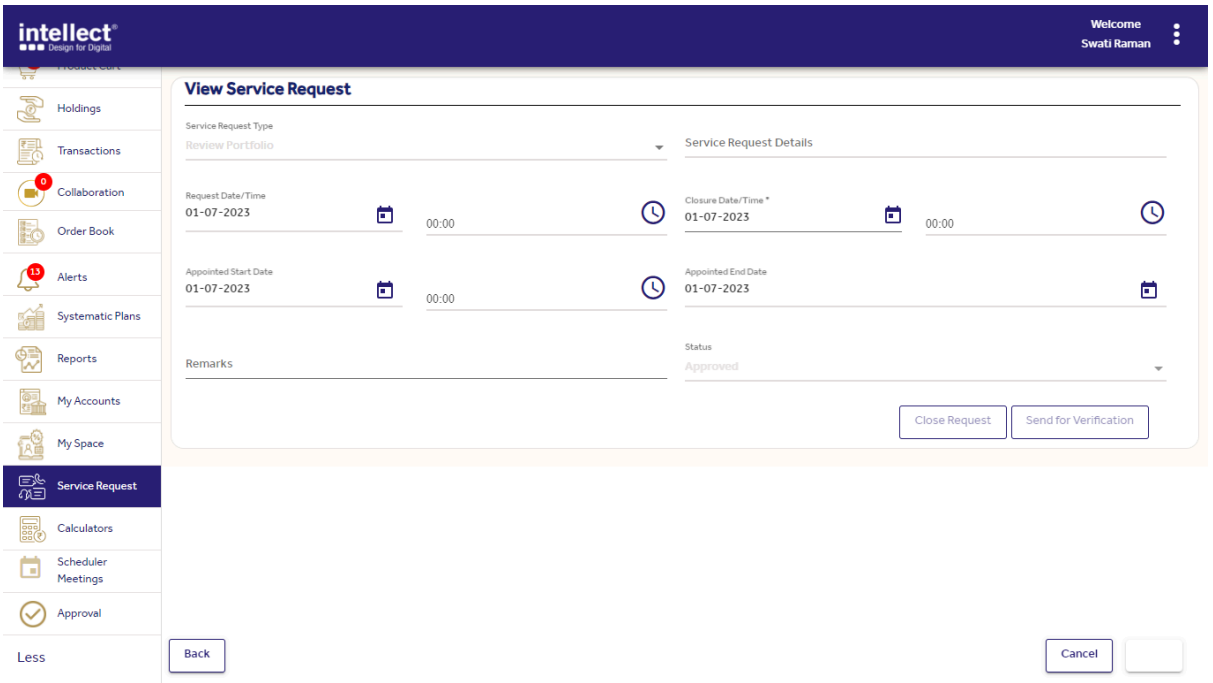


Screen:View Service Request(Collapsed View)

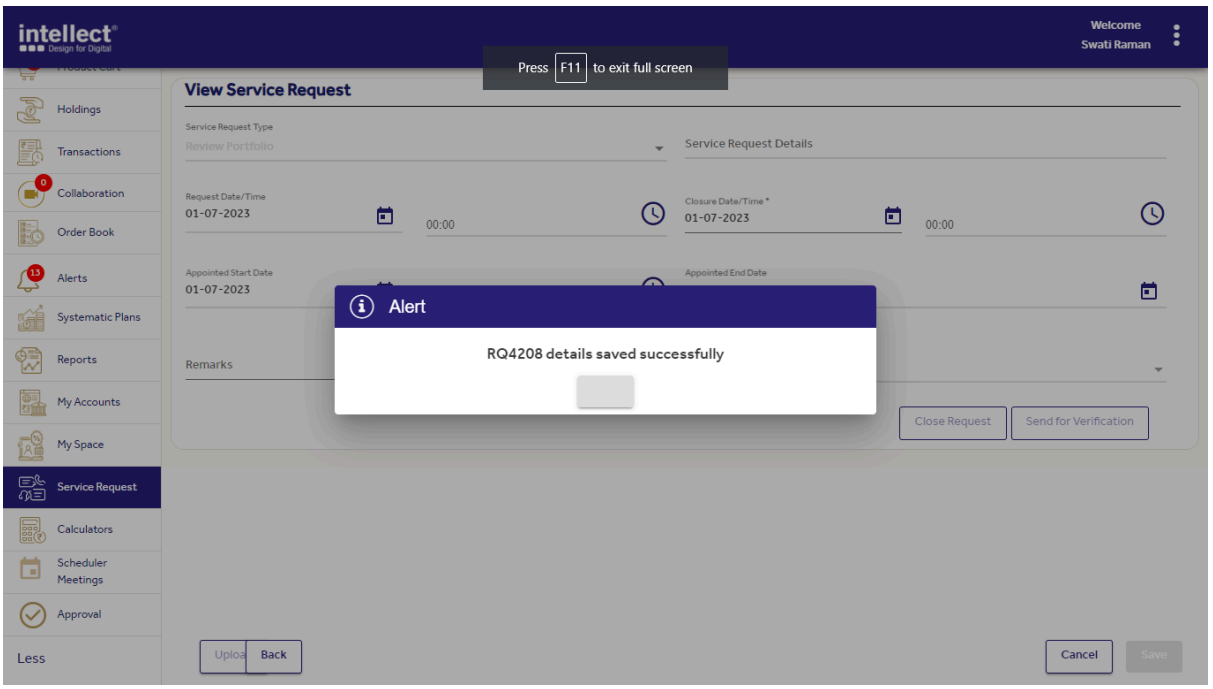


Screen: View Service Request(Expanded View)

5. Customer can edit these fields and “Save” the service request. Updated details are saved in the service request. System will give the below confirmation message once the details are saved “<<Request ID>> details saved successfully”

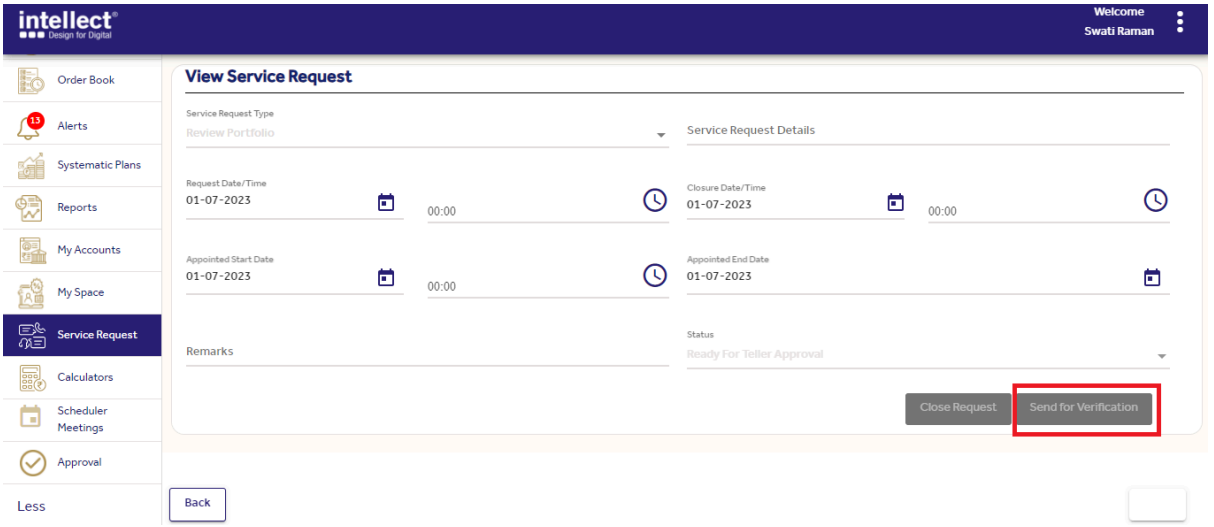


Screen: Edit Service Request



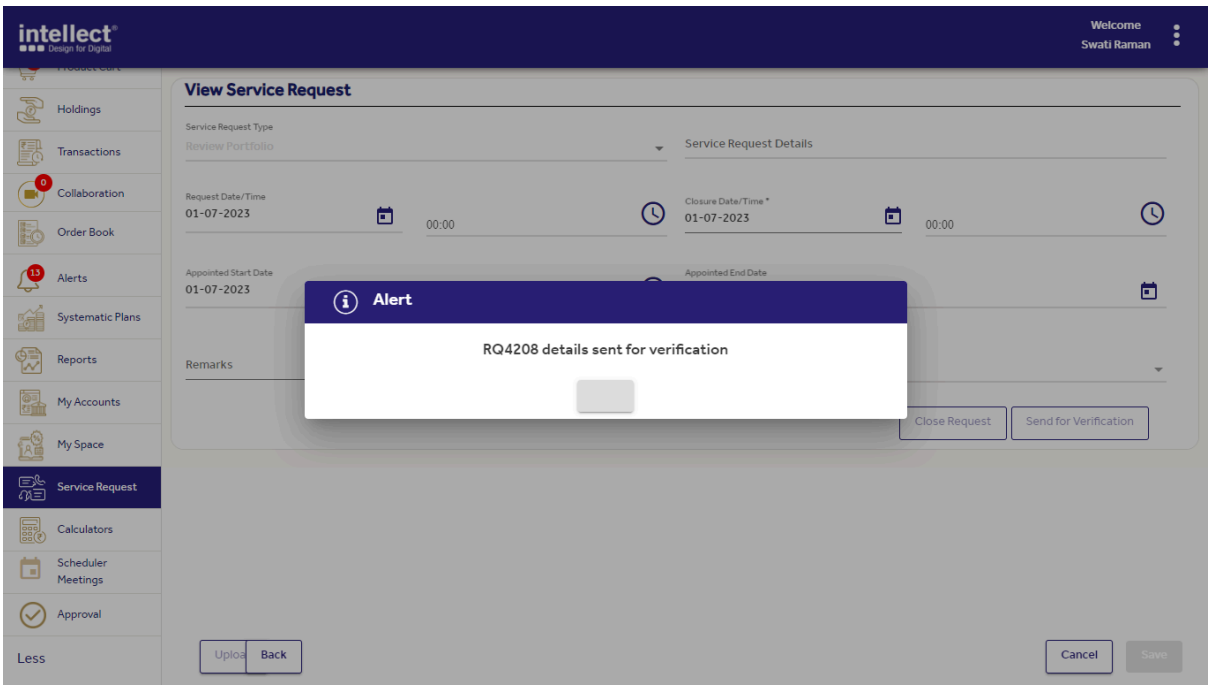
Screen: Save Service Request

6. Customer will have "Send for Verification" button to send this request for verification. However if the mandatory fields like Service Branch, Resolution Unit, Sales Date are not filled by the RM, then customer cannot send this record for Verification. The system gives below message
"<<Request ID>> will be sent for verification after the review by the bank staff".



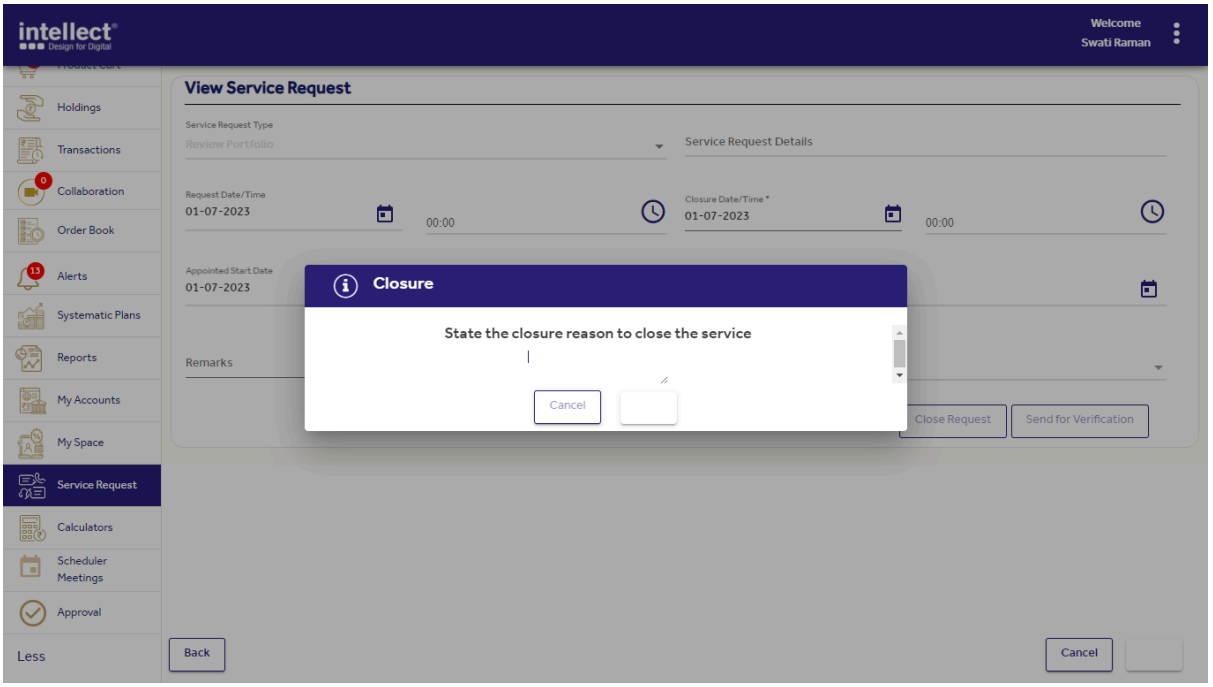
Screen: Send for Verification

7. Customer will have "Send for Verification" button to send this request for verification. If the mandatory fields are filled by the RM, then customers can click on Send for Verification. The system gives below message
"<<Request ID>> details sent for verification"

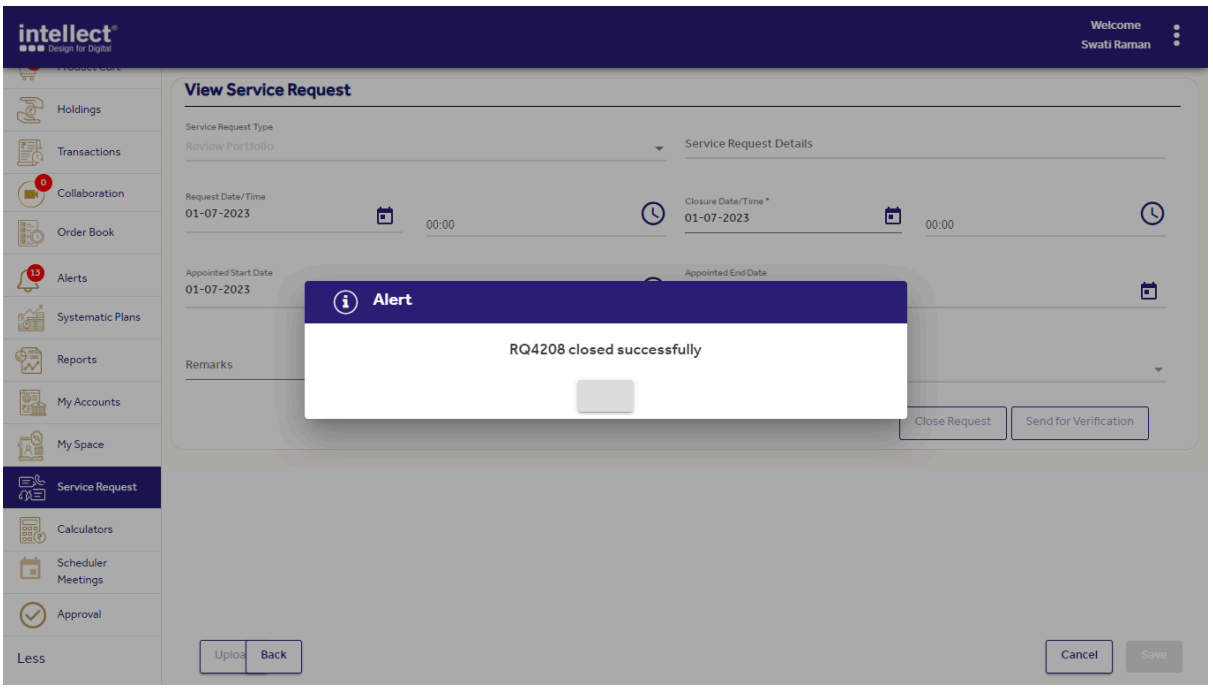


Screen: Send for Verification(Service Request)

8. Customer will have access to “Close Request” button if they wish to close the request.Customer will enter closure reaason and will click on Save. System will give the below confirmation message “<<Request ID>> closed successfully”



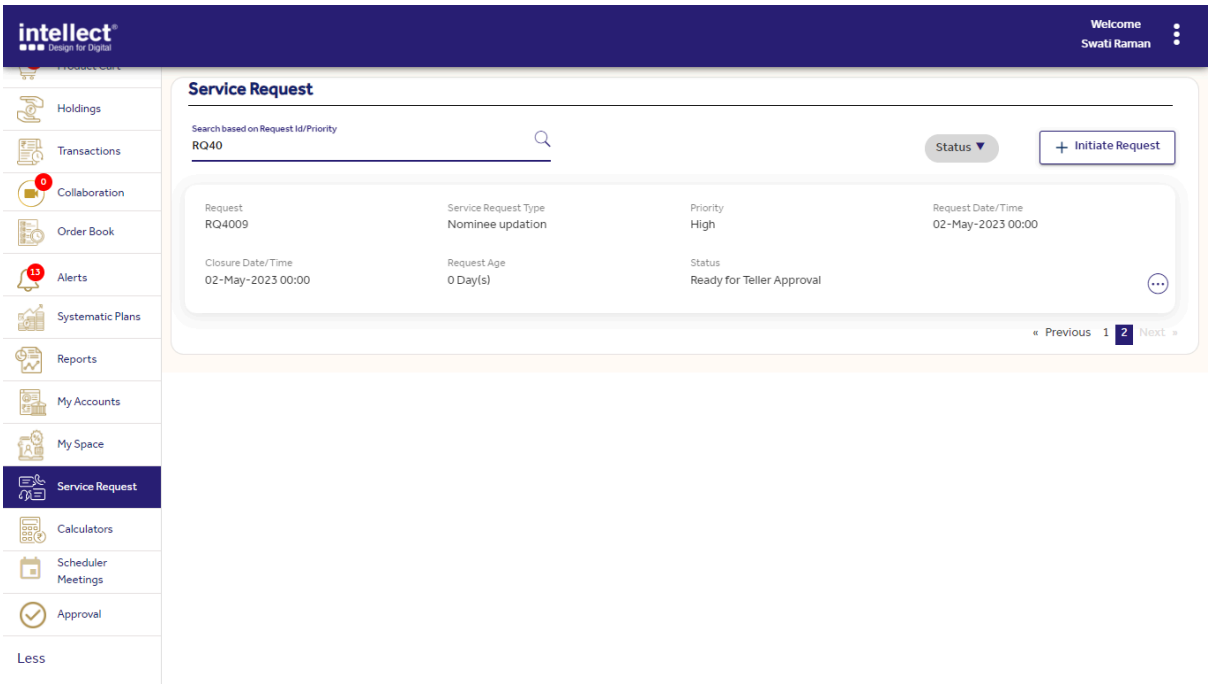
Screen: Close Service Request



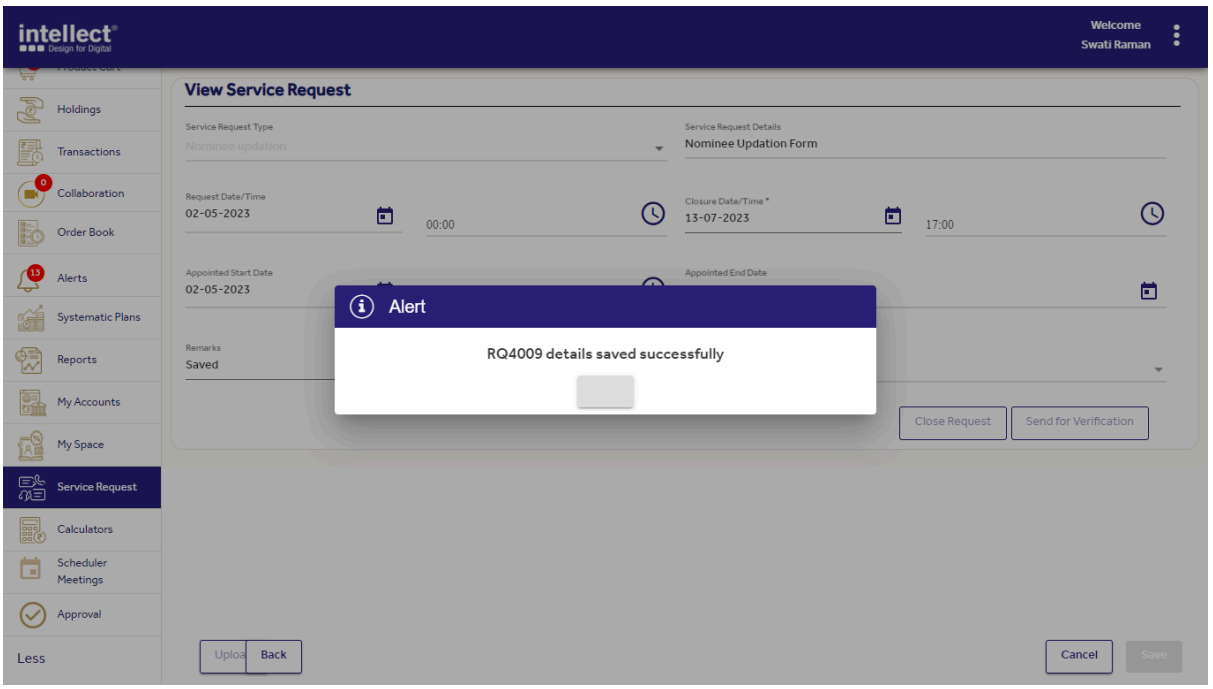
Screen: Service Request closed

3.2.2 View/Modify the Service Request in "Ready for Teller Approval" Status

1. If the customer accesses this service request when the status is "Ready for Teller Approval", the fields which were displayed to the customer at the time of request initiation will be displayed if customer view/modify the Service Request in "Ready for Teller Approval" status.

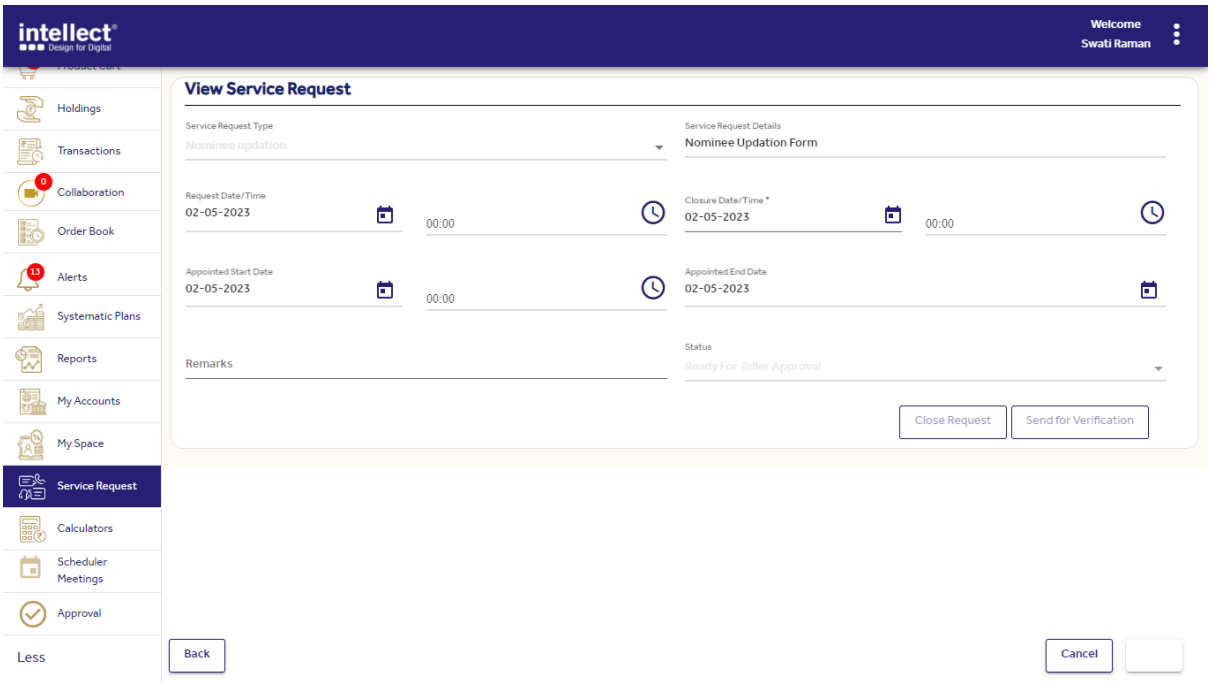


2. If Customer wants to edit some of these fields they can modify the fields save the details by clicking on the "Save"button. Updated details will be visible to the resolver. System will give the below confirmation message once the details are saved
   "<<Request ID>> details saved successfully"

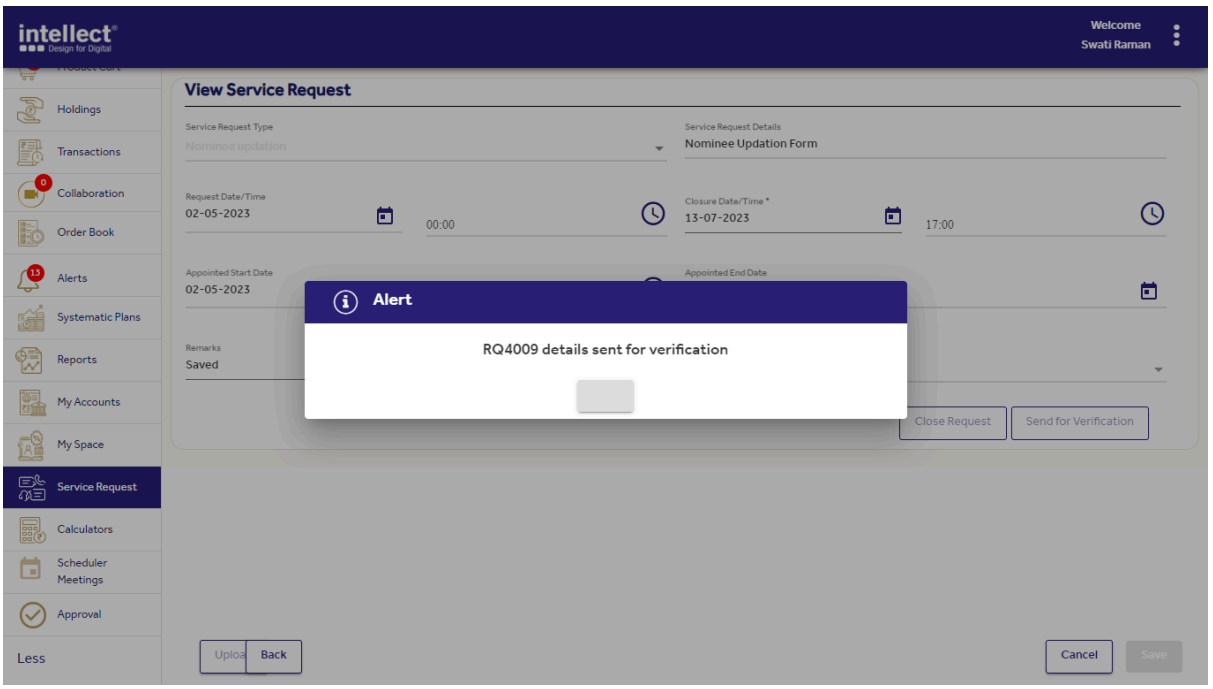


Screen: Edit Service Request

3. Customer will have "Send for Verification" button. If Customer clicks on "Send for Verification" and the updated details will be visible to the resolver (same as save button). System gives below confirmation message
"<<Request ID>> details sent for verification"

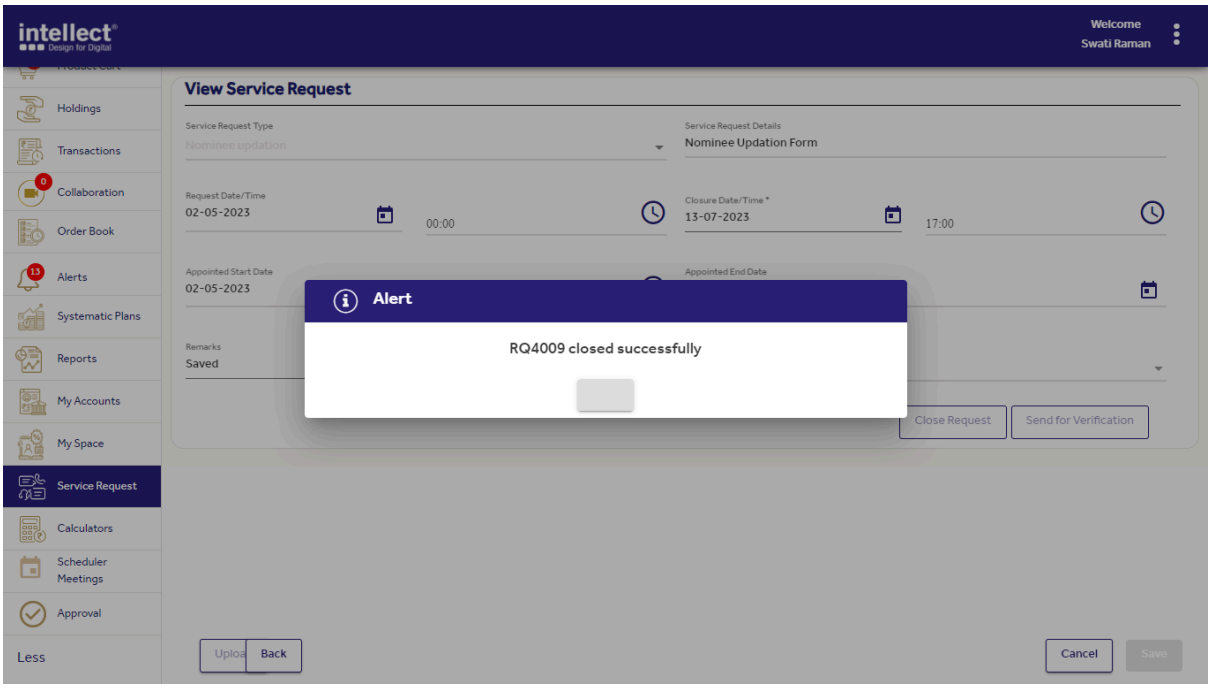


Screen:Send for verification



Screen: Sent for Verification(Service Request)

4. Customer will have access to “Close Request” button if they wish to close the request. System will give the below confirmation message
   “<<Request ID>> closed successfully”

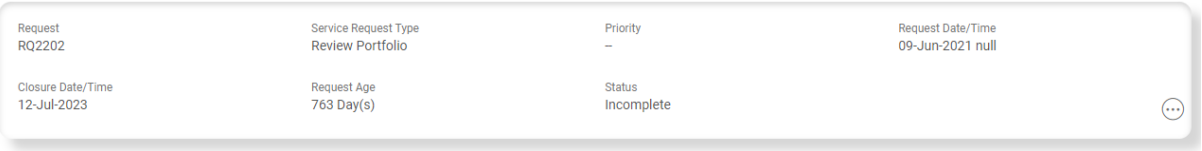


Screen: Close Service Request

3.2.3 View/Modify the Service Request in “Incomplete” Status

1. If the Resolver rejects a service request due to any reason (such as incomplete document/wrong document uploaded etc.), the status of the Request is changed to “Incomplete"

2. If the customer accesses this service request when the status is “Incomplete”, the fields which were displayed to the customer at the time of request initiation will be displayed if customer view/modify the Service Request in “Incomplete” status



3. Customer can edit these fields and “Save” the service request. Updated details will be visible to the resolver but the status of the record will be “Incomplete”. System gives below confirmation message
   “<<Request ID>> details saved successfully”
4. Customer will have the option to re-upload the corrected document related to the Service Request. To do this, they can click on the “Browse” button to upload the correct file for upload.
5. After uploading the document, Customer can click on the “Send for Verification” button. If Customer clicks on “Send for Verification”, then updated details will be visible to the resolver and the status of the record will be “Ready for Teller Approval”. System gives below confirmation message
   “<<Request ID>> details sent for verification”
6. Customer will have access to “Close Request” button if they wish to close the request. System will give the below confirmation message
   “<<Request ID>> closed successfully”
