1. Introduction

Service Request allows the customer to utilize services given by the bank outside the branch. It also allows the bank and customer to track the service request throughout its life cycle. Service Requests can be initiated by Relationship Manager/Customer. This document illustrates the service request initiated by the customer through the Mobile App. When a service has to be consumed by a customer, they create a service request in the system. Their RM then meets the customer, collects the necessary document(s) if not already uploaded by the customer and submits it in the bank. Once the documents are submitted, the service request is executed by operations staff.

The journey of customer request is divided into two steps below

a. View/Modify Service Request
b. Initiate Service Request

The purpose of this document is to guide the user through the service request journey in the application.

2. Prerequisites

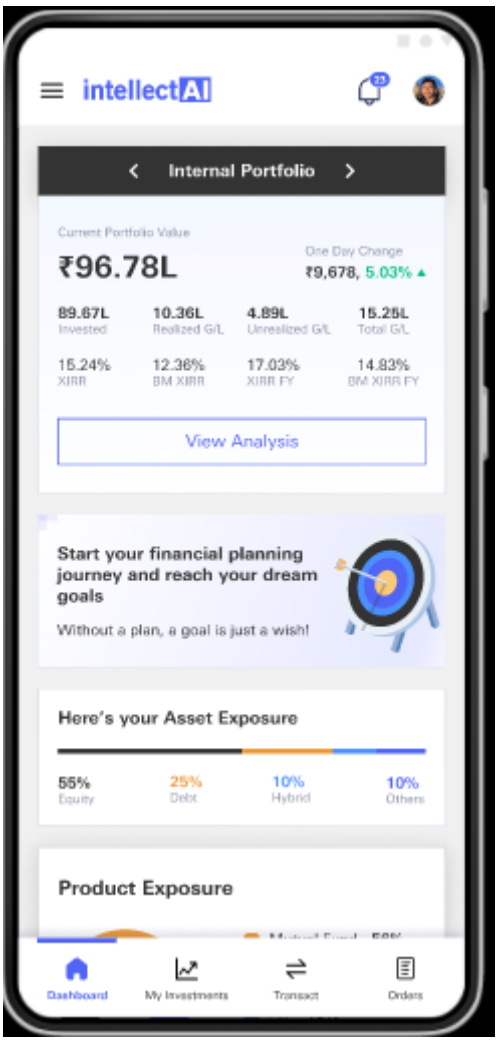
S No	Process	Reference Document
1	Customer Onboarding	Journey of Lead to Prospect and Prospect to Customer
2	Adding the Service Request Type in General Parameters	Journey of Customer Request to Request Closure
3	Service Units should be defined for selecting the Initiator and Resolver Service Units	Journey of Defining Maintenance
4	Maintain Service Request Type Definition	Journey of Customer Request to Request Closure

3. Flow Diagram

Service Request - DIY.pdf

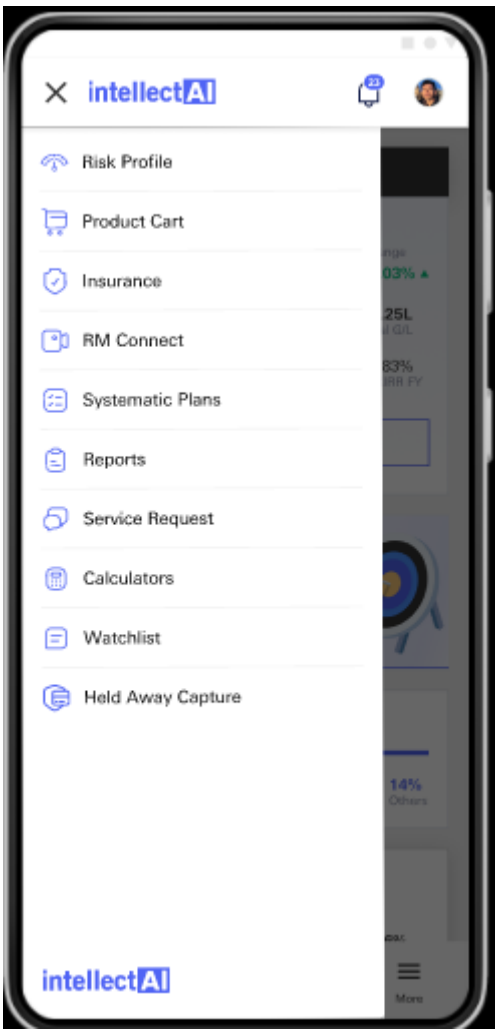
4. Process Flow

1. Once logged in, the customer will see the below screen



Screen: Dashboard

2. They can navigate to the Service Request screen by clicking on "Service Request" in the hamburger menu. Here, they can view, track and modify their existing requests, and raise new ones



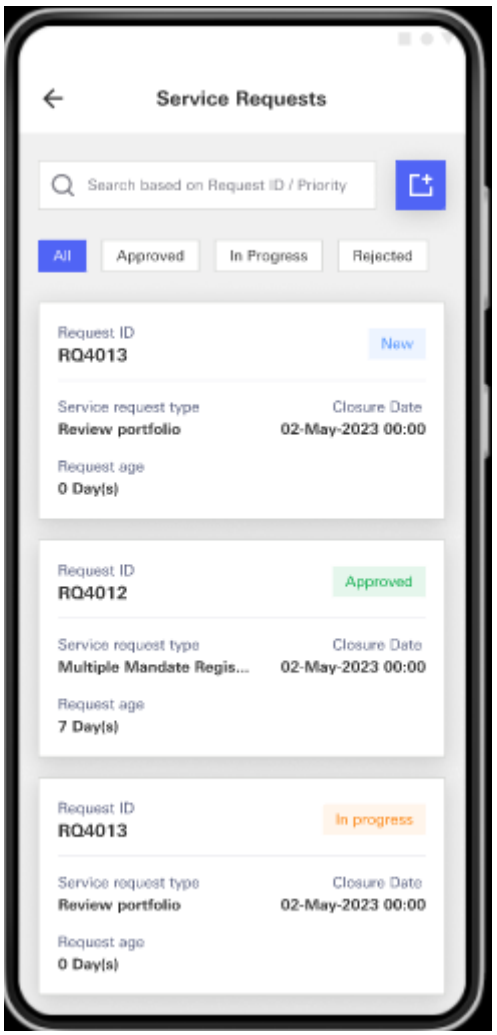
Screen: Select Service Request

4.1 View All Service Requests

All the service requests initiated by the customers and service requests initiated by the RM on behalf of the customer from RM Office can be viewed in the mobile app. The customer can perform the following actions here:

a. Initiate Service Request
b. View/Modify Initiated Service Request

1. Customer selects the “Service Request” icon available on the left navigation panel to navigate to the “View all Service Requests” screen



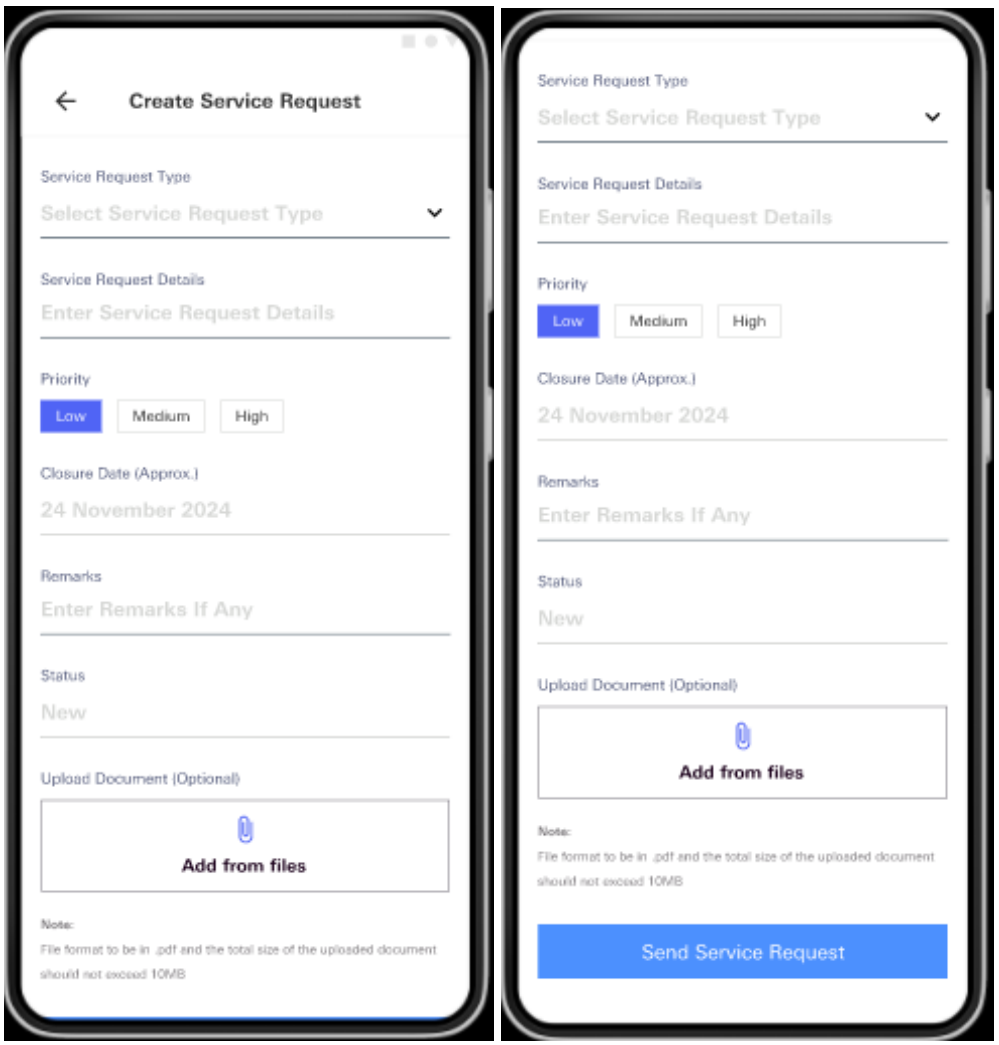
Screen: Service Request queue

2. Customer views all the service requests initiated with Request ID, Status, Service Request Type, Closure Date and Request Age etc. Requests can be searched using the Request ID and Priority
3. They can filter the service request records by status. Status here refers to service request status like New, Approved, and Ready for Teller Approval, Completed etc.

4.2 Initiate New Service Request

1. Customer clicks on the "Initiate Request" icon beside the search bar to navigate to the create new service request screen
2. They can then initiate the service request by selecting the service request type, filling in other necessary details like service request details, capturing remarks and uploading document(s) and submit the form after filling up all the applicable fields by clicking on the "Send Service Request" button.
3. Service Requests initiated by the customer are auto approved by the system. The status of the record will be "Approved". System will give the below confirmation message:

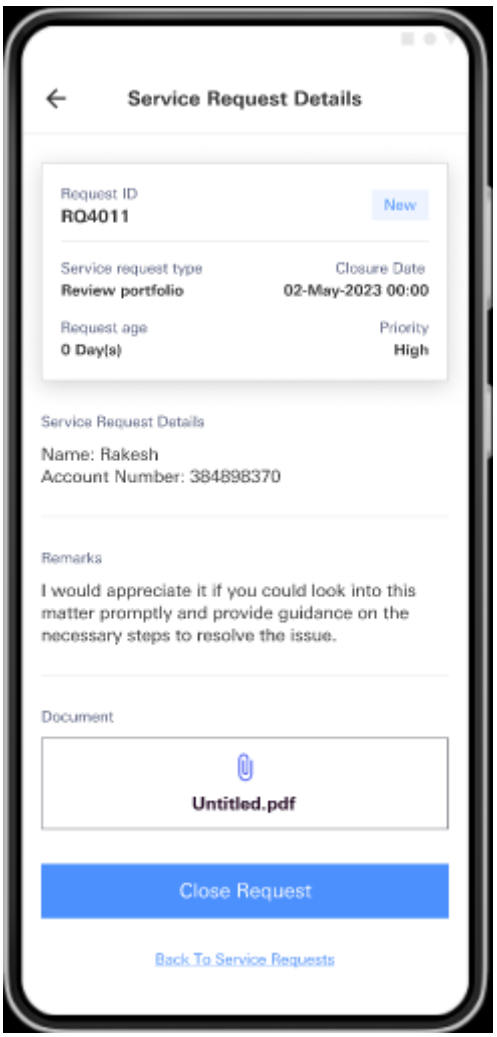
   "<<Request ID>> is successfully submitted for processing. To view the status or to make modifications, use the Request ID mentioned."



Screen: Create New Service Request

4.2.1 View/Modify the Service Request in "Approved" Status

1. Service Requests created by the customer will be visible in their Service Request queue in the mobile app and web portal, and in the request queue of their mapped RM in RM Office. In the journey of creating service request to request closure, the job of the customer is only to initiate the service request and rest of the steps are done by the RM from through RM Office and by the respective Resolution team
2. Customers can track the status of the service request from the Service Request Queue from the Mobile app and the Web Portal. They can also modify service requests through their request queue
3. Once a Service Request is created by the customer, RM can meet the customer to collect the relevant documents required for the service request. RM enhances details if required and uploads documents (if not already done by the customer) and send this request to the resolver for resolution by clicking on "Send for Verification" from RM Office
4. Service Requests initiated by the customer are auto approved by the system. If the customer accesses this service request when the status is "Approved", the fields which were displayed to the customer at the time of request initiation will be displayed if the customer views/modifies the Service Request in "Approved" status.



Screen: View Service Request

5. Customers can edit these fields and "Save" the service request. Updated details are saved in the service request. System will give the below confirmation message once the details are saved:

   "<<Request ID>> details saved successfully"

6. Customer will have access to "Close Request" button if they wish to close the request. They will have to enter the closure reason and will click on Save. System will give the below confirmation message. Closed requests cannot be edited further

   "<<Request ID>> closed successfully"

7. To navigate back to their service request queue, they can click on the "Back to Service Requests" button

4.2.2 View/Modify the Service Request in "Ready for Teller Approval" Status

1. If the customer accesses a service request when the status is "Ready for Teller Approval", the fields which were displayed to the customer at the time of request initiation will be displayed if the customer views/modifies the Service Request in the "Ready for Teller Approval" status.

2. If they want to edit some of these fields, they can do so the fields and save the details by clicking on the "Save" button. Updated details will be visible to the resolver. System will give the below confirmation message once the details are saved
   "<<Request ID>> details saved successfully"

3. Customer will have access to “Close Request” button if they wish to close the request. System will give the below confirmation message
   “<<Request ID>> closed successfully”

4.2.3 View/Modify the Service Request in “Incomplete” Status

1. If the Resolver rejects a service request due to any reason (such as incomplete document/wrong document uploaded etc.), the status of the Request is changed to “Incomplete"

2. If the customer accesses this service request when the status is “Incomplete”, the fields which were displayed to the customer at the time of request initiation will be displayed if customer view/modify the Service Request in “Incomplete” status

3. Customer can edit these fields and “Save” the service request. Updated details will be visible to the resolver but the status of the record will be “Incomplete”. System gives below confirmation message
   “<<Request ID>> details saved successfully”

4. Customer will also have the option to re-upload the corrected document related to the Service Request. To do this, they can click on the “Browse” button to upload the correct file for upload

5. Customer will have access to “Close Request” button if they wish to close the request. System will give the below confirmation message. Closed requests cannot be modified further
   “<<Request ID>> closed successfully”

5. Field Level Details

S No	Field Name	Field Description	Field Type	Editable	Data Type	Mandatory	List of Values	Remarks
Service Request Card Details								
1	Request	Displays the Service Request ID Number	Display	No	Alphanumeric	No	Not Applicable
